This amendment is raised to answer supplier's questions.

Question 1: One requirement is for the AVOS to interface with a computer unit (AVOS Bridge PC) and graphical user interface (Touch Screen Monitor). MSC describes the AVOS Bridge Software. Is it MSC's intent to upgrade the Software or use a new Software?

Response 1 : The MSC has not yet made a final decision regarding the approach for a future enhanced version, or complete replacement of the current AVOS Bridge PC software. As outlined in the RFI, the software which runs on touch screen PC provides a graphical interface which displays the current observations, as well as an interface for human observers to enter observations. In addition to this, the software is used by MSC Technicians to configure and interface with the AVOS system in support of system maintenance and interrogation. This RFI process provides an opportunity for industry to provide alternative mechanisms to deliver the same functionality.

Question 2: Page 6 states, "It is the intention of the MSC to continue to use the existing infrastructure including the moored buoy hulls and AVOS wind towers and component enclosures." Does EC intend to use the existing enclosures both in the buoys and in the AVOS?

Response 2: It is the intention of the MSC to utilize the existing AVOS enclosures, however for the moored buoy application, different enclosures could be used, with one important consideration – they must fit within the physical constraints of the existing buoy hulls. The specifications for each type of buoy hull has been provided in the RFI.
