

Questions/Clarifications

1. Are drawings submitted detailing the design of our building to be considered part of the 50 page maximum? Does PWGSC require drawings to be submitted? If so what size is preferred?

No drawings are required, the design proposal submission is detailed in Category 3 - Design Proposal (page 23 of 81) in the Submission Requirements and Evaluation document.

2. Are the hydro and gas lines that are going to be running under the footprint of the building abandoned? Is it acceptable to leave the lines where they are and run our building over-top of it? Or will it be required that these lines are to be relocated outside of the building foot print?

This will be addressed in an addendum.

3. Are pre-engineered buildings acceptable for the header house building?

As per Section 5.1.1 of the ToR, the header house is to be a single storey steel building system.
