Amendment 002 is raised to answer the following questions:

Question 1: Please advise degree of sand blast and total mill thickness on painting systems as defined by industry standards.

Answer to Question 1: The primary concern is to ensure that the steel is sandblasted to remove any surface rust or corrosion that would otherwise cause paint to not stick. For the thickness of paint, we have said we want three coats. If there is a defined "industry standard" as mentioned in the question, that is something we would like the contractor to adhere to and if necessary, describe in their bid.

Question 2: Please advise name and contact information of the person(s) responsible for arranging a prebid site visit.

Answer to question 2:

Optional Site Visit

It is recommended that the Bidder or a representative of the Bidder visit the work site. Arrangements have been made for a tour of the work site. The site visit will be held on May 10, 2013, at 3:00pm with location at Bedford Institute of Oceanography, 1 Challenger Drive, Dartmouth, Nova Scotia B2Y 4A2. Bidders are requested to communicate with the Contracting Authority three days before the scheduled visit to confirm attendance and provide the name(s) of the person(s) who will attend. Bidders may be requested to sign an attendance form. Bidders who do not attend or send a representative will not be given an alternative appointment but they will not be precluded from submitting a bid. Any clarifications or changes to the bid solicitation resulting from the site visit will be included as an amendment to the bid solicitation.

Bidders are required to go to the main entrance (1 Challenger Drive) and sign in with the Commissionaires.

Find attached a photo of the current wave tank.
(See attached)

All Other Terms and Conditions Remain the Same.

Figure 1. Photo of current wave tank. The second tank will be built identical to the first.

Schematic of wave tank (Not to scale). All dimensions are in cm and are approximate. Various items shown within the tank structure (e.g. coloured dots, LISST, wave maker/absorbers) do not form part of the tank, but show for demonstration purposes where equipment and sampling points are located.
