THE FOLLOWING QUESTION WAS SUBMITTED AND THE ANSWER IS PROVIDED BY THE DEPARTMENT OF NATIONAL DEFENCE;

Question 5:

I have a question regarding the materials specified in the drawings for the frame sections of the security cage. The drawings specify 10 ga material for the angle iron. Angles are not manufactured in this size.

Angles are commercially available in 1/8" thickness and 3/16" thickness. 10 ga is right in the middle. We can fabricate the angles from 10 ga sheet metal, however, due to the way sheet metal is manufactured (the thinner the material, the wider the tolerance) it would not necessarily be much thicker than the 1/8" commercially available angle.

For reference, 1/8" is .125 and the range tolerance limit on 10 ga sheet metal is .126" to .134" – the specification on the drawing is .130".

Using commercially available angle iron of either size is 1/3 cheaper than manufacturing the angles from sheet metal and also has tighter tolerances.

Which size of angle would DND prefer?

Answer 5:

1/8" thick steel angle as per CSA G40.20-44W is acceptable
