## Questions and Answers:

Q:

Annex D – there are a number of references regarding site condition that is the “responsibility of the consultant to verify on site and insure . . . .”. Could you please confirm when we will have to opportunity to review each site to confirm the existing site conditions?

A:

Only the successful bidder will have access to all the sites.

Q:

Could you please confirm if we are required to apply for a building permit with the local municipality for each project and are we required to carry the cost of the building permit fee in our tender price.

A:

Yes - the GC is responsible to acquire a Building permit for each site and/or building and carry the cost for this permit.

Q:

The specification states that the building control systems are to be compatible with the existing systems. Could you please provide the detail of the existing systems?

A:

Answered in previous question. Each institution is different but typically have Delco or Delta systems.

Q:

The tender do not provide detailed information regarding the existing services (i.e pipe size and capacity). Are we to assume that the existing service has the capacity to accommodate the new building service requirements?

A:

Yes

Q:

Unit Price Table - Item 1 – Asphalt:

Provide the thickness and type of asphalt

A:

The thickness and type are designer choices. The performance of the paved area is what we can define: heavy truck traffic is expected on any of the CSC paved areas, so that is what we need to design to.

Q:

Provide the thickness and type of subsurface construction.

A:

Design to the use and the OPSD

Q:

Is the unit rate to include the sub-excavation and disposal of the native soil

A:

Yes

Q:

Unit Price Table · Item 3 – Hydro seeding:

Is to include topsoil. If yes, provide the thickness and is the unit rate to include the sub-excavation and disposal of the native soil?

A:

100 mm topsoil and unit price to include disposal of native materials.

Q:

Unit Price Table · Item 4 – Sidewalks:

Provide the thickness concrete walks.

A:

Sidewalks are generally 6" or 150mm, but again, they are the design builder and they have to design it to suit the program and geotechnical.

Q:

Provide the thickness and type of subsurface construction.

A:

Ontario Provincial Standards.

Q:

Is the unit rate to include the sub-excavation and disposal of the native soil?

A:

Yes.

Q:

Could you please provide some information regarding the control systems of the existing facilities so we can ensure that our system are compatible.

A:

Each institution is different. Typically we have Delco or Delta BAS systems.

Q:

Could you please confirm if the buildings are to be classified as post disaster buildings thus requiring seismic design.

A:

No
