SOLICITATION AMENDMENT
MODIFICATION DE L'INVITATION

The referenced document is hereby revised; unless otherwise indicated, all other terms and conditions of the Solicitation remain the same.

Ce document est par la présente révisé; sauf indication contraire, les modalités de l'invitation demeurent les mêmes.

Amendment no.002**Hyperspectral imager****1. Amendment no 02**

Please find enclosed Amendment 02. It is to be considered part and parcel of the Request for Proposal Documents.

The amendment include:

- 1) Bid closing date extension
 - 2) Questions and Answers 6 to 8
-

1) Bid closing date extension

CLOSING DATE EXTENSION: FROM: Wednesday, September 26, 2012

TO: Tuesday, October 9, 2012

2) Questions and Answers 6 to 8:**Question 6:**

In ANNEX "A" REQUIREMENT, 2.b Spectral Requirements:

Please clarify the requirement for spectral sampling. The solicitation calls for less than or equal to 5nm resolution up to 1000nm and less than or equal to 10nm resolution greater than 1000nm. Does this mean that the users require resolution of each and every 5nm band from 400nm to 1000nm (120 bands) and every 10nm band from 1000nm to 2400nm (140 bands)?

Answer 6:

Yes

Question 7:

Could a patterned dichroic methodology be used in conjunction with a prismatic camera containing multiple arrays to provide a hybrid approach? Each array could be outfitted with custom Bayer or Custom Mosaic coatings that could divide each array up into 10 different spectral channels. Each array could then be "stitched" together to provide a compact solution.

Answer 7:

The proposed solution does not meet our requirements.

Question 8:

Additional clarification: could a collaborative approach to define and refine the spectral regions of interest on the way to producing multiple patterned dichroic filter arrays be provided as a potential solution for this requirement? We note and suggest that such a partnership with a vendor with significant expertise in narrow band filter production would benefit the end user by making the spectral sampling approach more efficient. This approach could be accomplished by using a sequential methodology in test allowing the user to identify and verify the spectral bands before installing them on the imaging array.

Answer 8:

The proposed solution does not meet our requirements.

ALL OTHER TERMS AND CONDITIONS REMAIN UNCHANGED.
