Solicitation Amendment No. 5

The following amendment is raised to post questions and answers (Q & A's):

- **Question:** DATA VALIDATION TEST (DVT) (MANDATORY): For all compliant bids, the Bidder must perform a Data Validation Test (DVT) with a system of the type proposed for purchase by the Government of Canada to validate performance claims and system compliance with the requirements as stipulated in Annex "A" and "B". The Bidder must conduct the Data Validation Test at a mutually agreed upon date/time/location (system must be made available within 30 days after notification of compliant bid), only one DVT will be performed per compliant system; CBSA personnel must be able to observe and direct the testing. Test results from the DVT will be used to confirm compliance and point allocation based on the Technical Evaluation Matrix. The detailed Matrix will be supplied to the Bidder during the DVT. Failure to demonstrate compliance will result in the Bidder's proposal being declared non-responsive. CBSA will be responsible for all travel and living expenses for CBSA personnel attending the Testing. The Bidder will be responsible for all costs to furnish test equipment, test fixtures, radiation survey instruments required to demonstrate systems compliance to Annex "A" and "B". The Bidder will be responsible for all travel and living expenses for its personnel attending/performing the Testing.

Can the Crown please confirm who is responsible to co-ordinate access to the radioactive materials and the necessary site licenses? Also, please confirm who is responsible to bear the costs of radioactive materials and associated site license fees required to test the radiation detection option (ref. Annex "B" - POINT RATED TECHNICAL CRITERIA -- Radiation Detection Capability) during the Data Validation Test? The OEM's or the Canadian Government?

Response: The Crown expects that any bidder offering a radiation detection option (ref. Annex "B" - POINT RATED TECHNICAL CRITERIA -- Radiation Detection Capability) has the necessary equipment to test this capability. As such, the bidder is responsible for providing the radioactive sources detailed in ANSI N42.35; this includes coordinating all licensing and assuming all costs related costs for this testing.

Note that CBSA will allow some flexibility with respect to the nominal activity of each source, to mitigate the need for the bidder's procurement of new sources, so long as the raw radiation detection data (raw detector counts) are available for analysis.
