This amendment to the Invitation to Tender #31970-131558/A for the UV Spectrophotometer has been raised to respond to the following questions and make the following revisions.

Questions

Question 1-2 pertains to the Requirements for the UV-Vis-NIR Spectrophotometer System

Question 1: Will a dual detector design with PMT range for UV-Vis and PBs detectors for NIR wavelength range be acceptable? (line item 8)

Answer: No. Triple detectors is a must-have requirement since the InGaAs detector provides tens of folds better S/N from 1000nm to 2000nm, especially for solid samples, which is crucial for our projects.

Question 2: Is a system with a grating of 1200 lines/mm at 250 nm for UV/Vis blazed and 300 lines/mm at 1192 nm for NIR blazed acceptable? (line item 10)

Answer: No a minimum of 320 lines/mm is required for NIR blazed as more lines/mm will provide a better wavelength resolution.

Revisions
