Delete:**BA06 CONSTRUCTION TIME**

The Contractor shall perform and complete the Work within 82 weeks (Nov 2014)* from the date of notification of acceptance of the offer.

*Specification Reference: Section 01 29 00, 1.3 Description of Work

Insert:**BA06 CONSTRUCTION TIME**

The Contractor shall perform and complete the Work by November 1, 2014 in accordance with the Specification, Section 01 29 00, 1.3 Description of Work.

Questions:

Q8. *As referenced in PWGSC's answer to Q4 of Addendum #002, the Disposal at Sea (DaS) permit specifies the disposal equipment, specifically dump scows. Is Canada open to other methods of bottom dumping other than dump scows, as there are other methods and equipment to complete the bottom dumping work.*

A8 The Department will consider other methods of bottom dumping provided the contractor can demonstrate that the disposal operation will be completed in accordance with the requirements of the specification, the Disposal at Sea Permits and the Disposal Site Management Plans established for the disposal sites. The exact number and position of the disposal coordinate points within the disposal site radius may vary depending on the contractors proposed method of bottom disposal .

Q9. *As a follow up to Addendum #002 Q4 & Q5, we request that PWGSC/Environment Canada make available to bidders the noted Environment Assessment and disposal site modelling data as noted in the answer to Q4 and in doing so extend the closing of the tender an additional thirty (30) days for bidders to evaluate, and comment.*

A9 The mitigation requirements of the Environmental Assessment and Disposal Site modeling have been incorporated into the solicitation documents.

Q10. *Part 1 Is Canada trying to exclude certain segments/members of the marine construction sector by specifying the equipment and operational methods? If not why is Canada specifying bottom dump scows for the method of transporting and the method of disposal when there are other methods and equipment available to complete the work?*

A10 No. The anticipated method of disposal is identified during the environmental assessment process as a requirement for the disposal at Sea Permit application. Bottom disposal equipment are specified based on a number of factors including the availability, site conditions, proven performance of this method historically at the site and the environmental and permitting requirements identified above.

Q11. *We are requesting the removal of ALL reference to Bottom Dump Scows in the tender calling as there are other types of equipment available to complete the work?*

A11 Dump scows are the most commonly used and proven equipment historically for completing the dredging at these locations however consideration for alternate methods of bottom dumping have been addressed in question 8 above. The reference to dump scows within the specification Section 35 20 23

Dredging, Clause 3.1.1.14 is hereby replaced with the following new Clause 3.1.1.14 Provide dredge equipment capable of maintaining the dredge material within the limits of the disposal equipment until delivery to the disposal site. The Departmental Representative has the right to order the removal of dredge disposal equipment where leakage or loss of material occurs prior to the depositing of the material at the disposal site.

All other terms and conditions remain the same.
