

Question 1:

We found the specifications to be somewhat sparse. Is there more information available?

For example, wheelbase, body requirements (now or forthcoming), is there an existing body that CMHC already has or is going to be installed on this cab/chassis?

Response 1:

The primary requirement is hauling capability. Wheelbase is not critical. CHMC is currently using a GMC Sierra HD which was lowered (to the height requirements listed) in order to fit in a parking garage located on Granville Island. Our intention is to have a custom flat deck fabricated to suit our needs after the model/ style of truck has been determined.
