### MANDATORY SPECIFICATIONS

#### MOTION PICTURE FILM SCANNER

Library and Archives Canada (LAC) has a requirement to purchase a film scanner and all associated equipment and workstations to meet their requirement for:

- The digitization of motion picture film;
- The digitization of related motion picture sound elements;
- The critical monitoring of digitized picture and sound elements; and
- The advanced colour correction and grading of digitized film elements.

LAC is looking for an integrated technological solution or a suite of component interconnected systems that meets the overall need.

LAC is open to considering the following solutions:

- One commercially available system that is able to meet all of LAC's requirements; or
- A 'best of breed' solution where commercially available products that excel in specific functional areas are brought together to meet LAC's requirements.

LAC will be concurrently developing its own internal IT network and storage infrastructure to support the purchase of a digital motion picture film scanner. It is important that the networking and high performance storage requirements of the complete film scanning solution be detailed and outlined in the solution proposal to ensure that the necessary IT architecture will be in place to facilitate a successful installation.

#### 1.0 IT Infrastructure

- 1.1 The solution must include dedicated high performance connectivity with sufficient throughput to support 2K film scanning in real time and 4K scanning up to 15 fps.

**Reference in Contractors Proposal:** \_\_\_\_\_

- 1.2 The solution must include a dedicated high performance NAS or SAN storage appliance with sufficient throughput to support 2K film scanning in real-time, 4K scanning at 10-15 fps and have a base storage capacity of 14TB. Please provide a detailed technical description of how this requirement will be achieved and specifications for a suitable network environment that would support this requirement.

**Reference in Contractors Proposal:** \_\_\_\_\_

- 1.3 The NAS or SAN storage appliance must be scalable for future expansion beyond the base 14TB initially required. Please provide a detailed technical description of how this requirement will be achieved.

**Reference in Contractors Proposal:** \_\_\_\_\_

- 1.4 The NAS or SAN storage appliance must allow concurrent connections to multiple clients (minimum 4 concurrent connections) including but not limited to, the scanner, additional colour grading workstation(s) and LAC's internal network. Please provide a detailed technical description of how this requirement will be achieved and specifications for a suitable network environment that would support this requirement.

**Reference in Contractors Proposal:** \_\_\_\_\_

- 1.5 The performance of the NAS or SAN storage appliance and the overall solution must be capable of supporting colour grading and transcoding activities on previously scanned film files from a secondary networked workstation while film scanning is in progress. Please provide a detailed technical description of how this requirement will be achieved and specifications for a suitable network environment that would support this requirement.
