### Amendment 003

Amendment 003 is raised to answer questions.

**Note:** In regards to the above mentioned solicitation for the batteries, we require clarification on the immersion test requirements for the BB-2590/U battery for this tender.

The table on page 2 of MIL-PRF-32383/3 has a note 1/ against immersion, shallow. Beneath the table note 1/, states that the test is modified herein. There is no modification included in the document.

The unmodified immersion test in MIL-PRF-32383 paragraph 4.7.3.8.1 on page 26 does not state that the connector and terminals are exposed or covered. This test is to be conducted in salt water.

The older specification MIL-PRF-32052 paragraph 4.8.5 method 1 on page 19 explicitly states that the test is conducted "with terminals protected against electrolytic action". This test is to be conducted in fresh water.

If the test in MIL-PRF-32383 paragraph 4.7.3.8.1 is conducted with exposed connector and terminals in salt water we would expect degradation of the connector and terminals.

**Q:** What is the exact immersion test requirement?

**A:** Test requirement is for as written in MIL-PRF-32383 with the connector and terminals covered in salt water immersion.

All other terms and conditions remain the same.
