The following clarifications are provided:

1. Building (construction) permit will be paid by consultant, not contractor.

2. The following is to be used for tendering the asbestos abatement of gaskets.

" Assume there are 25 gaskets located on 6 inch pipe.

" The asbestos abatement of the gaskets is to be completed using glove bag removal.

3. All of the drywall is to abated and treated as asbestos waste.

Asbestos contained in the drywall mud is present in low quantities and the samples themselves are a low representation of the drywall mud. This is the why we take a set number of representative samples based on the square footage of the subject material. Due to the low asbestos content within the drywall mud, a few samples are not representative because there is a high likely hood the sample can give a false negative. There may have been no asbestos present in the sample taken, however ½ a cm away there was asbestos (we are dealing with <2% asbestos content and a sample the size of a dime). Products like drywall mud have an uneven distribution of asbestos.

Since we assume the drywall was all put in at the same time, we assume the drywall mud was too. So, if some samples are positive then all are treated as positive (this is as per the regulations and standards too).

**END OF ADDENDUM**
