The following clarifications are provided:

Question: From the drawings provided and details from site, it appears that there will be a shortage of approx. +/- 4000 cubic meters of concrete required to backfill and restore the site as shown on the drawings. Please clarify what is material to be used to make up this shortage.

Answer: Consultant estimated the amount of existing clean concrete fill available from the existing concrete cast in place structure, and used a bulking up factor to estimate the volume required to store clean concrete fill on-site. There is no intent to require imported concrete fill to create final fill profile.

Question: If the quantity of the onsite concrete is not enough to fill all of the areas that require concrete rubble, are we to import additional concrete rubble or do we import more common fill. Please advise.

Answer: All concrete rubble from demolition of Radium Lodge is to be permanently stored on-site in locations described in drawings. No other concrete rubble will be required to be imported to site.

END OF ADDENDUM
