This amendment 002 is raised to provide a response to a supplier enquiry. The question and response are provided as follows:

=====

**Question:** Our MYA aluminum antenna series meets the requirements at lower frequencies, but the MYA series is not welded. Would your client be open to 'blue' instead of black, or cable assemblies to obtain an accessible N male connector?

**Response:** All internal connections should be soldered and end connector may be crimp or soldered. The LOW PIM antennas must meet the 3.13 of -150 dBc.

No change in the frequency range specifications is acceptable. We are looking for an instrument with as much versatility as possible. As a consequence, the wider frequency range provides application flexibility that is highly desirable.

NRSS ( National Radio Services Section) will stay with the black anodized as per MIL SPEC 8625F / TYPE III.

=====

**Question:** Do you have to bid on all line items to be eligible for the tender?

**Response:** As identified in the RFSO, suppliers must provide a bid on items 1 to 112 as mandatory.

=====

**Question:** Regarding Section 4 of the RFQ, can you please let me know if ordering separate mounts is an option for these antennas and what type of connections are required (crimp or soldered?).

**Response:** Antenna mounts are ordered as per needed with the antennas but not necessarily with every order. The mounts should be listed in Annex A2 Desirables.

=====

All other terms and conditions remain unchanged.
