Secured power supply

Growing importance of a secure power supply

As industrial processes and IT applications diversify, a secure power supply is becoming an increasingly important asset in the drive to cut production and maintenance costs. In emergency situations, the system logic of power distribution can become complex with mechanical devices looking after making, breaking, conducting and isolating power. Loads may sometimes need to be transferred from one supply to another — this will be the case when energy use is restricted or when the supply source is overloaded.

Tested against IEC 60947-6-1

In change-over applications where the loaded switch may need to be operated remotely, adequate durability has been ensured by testing against the IEC 60947-6-1 standard in the specification of endurance requirements.

Utilization categories:

- AC-31 for non-inductive or slightly inductive load
- AC-33 for motor loads or mixed loads including motors

Comparison of endurance test between IEC 60947-3 and -6-1 ($I_e = 315$ Amperes).

to diverse applications

Ensuring service continuity

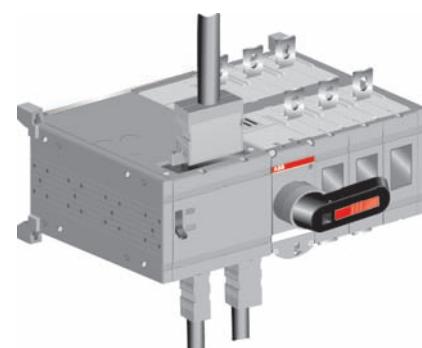

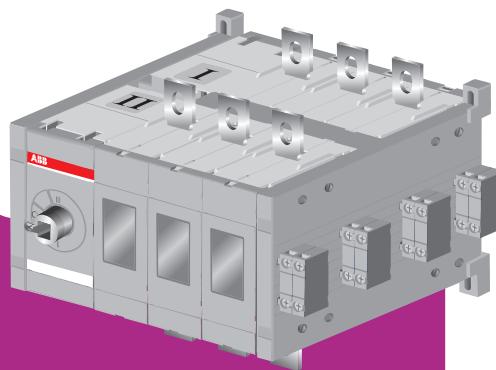

ABB OTc change-over switches ensure service continuity with a number of built-in, integrated safety features. The change-over mechanism, for example, offers three stable positions which ensure isolation of the two asynchronous power supplies. This eliminates any risk of short-circuit between them, even in the presence of transient voltages. In the motorized versions, the control circuit offers extra security: if two commands are received simultaneously, the OFF command is always given priority.

Easy installation for local or remote control

The design of ABB OTc change-over switches is advanced and compact, allowing installation in confined spaces at considerable savings. They are very easy to install: the manually operated switch is operated via a handle fixed directly on the switch or on the panel door.

The 16 to 125 Ampere sizes can be snapped-on to a DIN rail and the front fits in the 45 mm consumer unit cut-out.

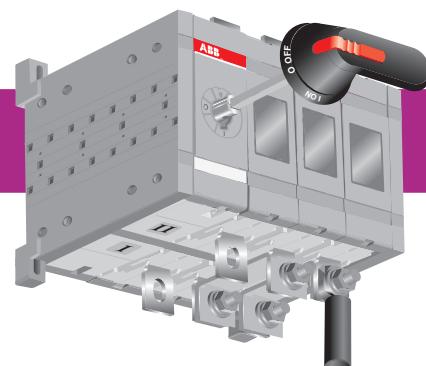

The motorized change-over switches have snap-on control wire connections. Auxiliary contacts can be snapped-on to the sides of the switches and the power terminals can be connected in parallel with bridging bars.

Applications

ABB Change-over switches are suitable for any emergency power supply system application requiring an uninterrupted supply of power from generator sets, UPS equipment or power utilities.

In Automatic Transfer Switching Equipment (ATSE), emergency power is transferred automatically from one supply to another via one or more load circuits by

the system logic that controls the motor operated transfer switch. The Closed Transition Transfer switches

ensure uninterrupted manual bypass to the power line. They have two overlapping positions (I and II) which ensure that the equipment is powered even when maintenance work is being done.

The door-mounted rotary cam switches come in many types: with two and three positions, with spring return, with overlapping contacts and so on.

Change-over kits

The modular change-over switches can be built up by adding a compact snap-on kit on the top of two switch-disconnectors. The kits do not require any additional foot print area, only the height is increased 12 mm.

Two standard switch-disconnectors can be connected with a mechanism operating into I-O-II positions. Two 3 or 4-pole switches are needed.

By-pass kits

A combination of two switches in parallel with a third switch for change-over operation to by-pass , for example, a breaker for maintenance. The by-pass attachment can be used together with another combination attachment. Three 3 or 4-pole switches needed.

Reversing bars

A reversing switch can be built up by using phase sequence bars in two phases.

The kit includes two phase sequence conversion bars.

The missing bridging bars must be ordered separately.

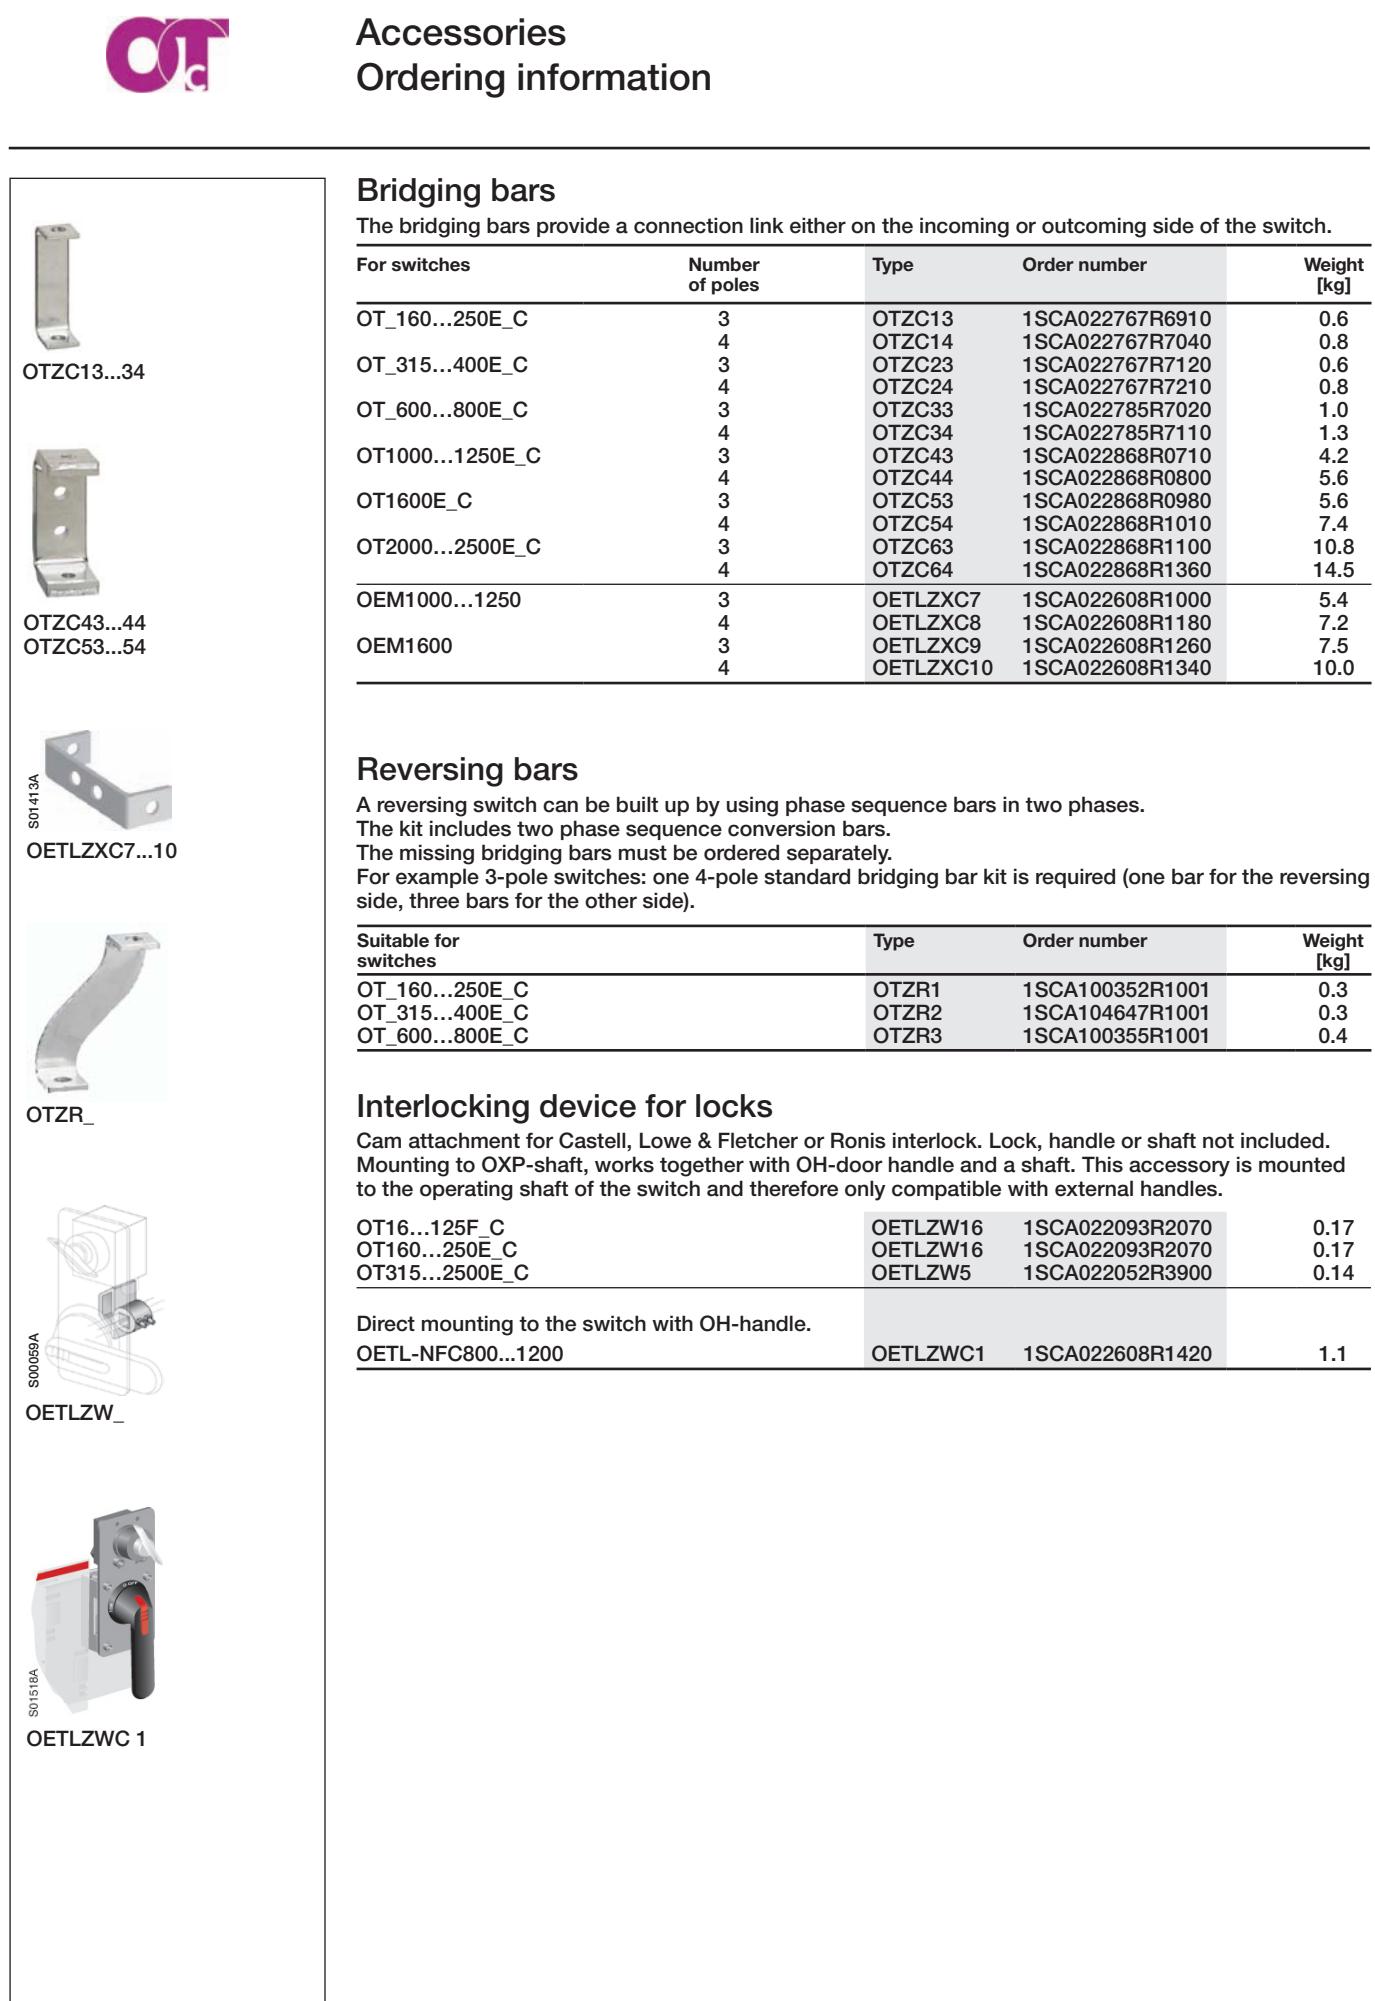

For example 3-pole switches: one 4-pole standard bridging bar kit is required (one bar for the reversing side, three bars for the other side).

Notes

Rotary change-over and bypass cam switches

The rotary cam switches are the most space saving changeover solutions, for the door and modular base mounting.

The standard range includes a black handle and finger protected terminals. A large variation of front plates for customized engraving enables special cam switches.

Special cam switches can be configured on the Internet by the Camweb configurator. The specification and ordering of special cam switches is as easy as selecting standard products!
