## **Executive Summary**

In August 2013, Stantec Consulting Ltd. conducted a Supplemental Site Investigation at Sheffield Farm, Saxon Street, Centreville, Nova Scotia, for Public Works and Government Services Canada, on behalf of Agriculture and Agri-Food Canada.

The purpose of the Supplemental Site Investigation was to delineate metals impacts associated with the subject property identified in previous work by MGI Ltd. (2004) and SNC Lavalin Ltd. (2010). The findings of the Supplemental Site Investigation are presented in Table 1.

**Table 1      Summary Table of Findings Potential/Actual Areas of Concern**

Potential Source Description	Contaminants of Concern	Media of Concern	Results of Supplemental Site Investigation
Metals in the soil in the vicinity of the Former Farmhouse and Former Garage Building.	Metals: Arsenic Copper Lead Zinc	Soil	Several metals concentrations (arsenic, copper, lead and tin) in one or more soil samples exceeded CCME agricultural guidelines. The horizontal extent of metals impacted soil was confirmed, as was the vertical extent, with the exception of the area to the southwest of the Former Garage Building.

The statements made in this Executive Summary are subject to the same limitations included in Section 5.0 (Closure), and are to be read in conjunction with the remainder of this report

# DRAFT SUPPLEMENTAL SITE INVESTIGATION

## SHEFFIELD FARM, UPPER DYKE VILLAGE, NOVA SCOTIA

Introduction  
October, 1, 2013

## 1.0 Introduction

Stantec Consulting Ltd. (Stantec) was commissioned by Mr. Cory Alexander, of Public Works and Government Services Canada (PWGSC), on behalf of Agriculture and Agri-Food Canada (AAFC) to complete a Supplemental Site Investigation on Sheffield Farm, located at 326 Saxon Street, Centreville, Nova Scotia (Figure 1).

### 1.1 OBJECTIVES

This work had the following general objectives:

- review existing and supplied environmental assessment reports;
- complete a Supplemental Site Investigation at the Site to confirm vertical and horizontal presence of metal impacted soil in the vicinity of the Former Farmhouse and Former Garage Building; and
- prepare a report with the results of the Supplemental Site Investigation.

### 1.2 ASSESSMENT STANDARDS

#### 1.2.1 Soil

The Canadian Council of Ministers of the Environment (CCME) Soil Quality Guidelines (SQGs) for the Protection of Environmental and Human Health (accessed online September 2013) are the applicable federal soil guidelines for on-site metals impacts.

The CCME generic SQGs were established for four primary land uses: agricultural, residential, commercial, and industrial. The generic CCME guidelines are conservative benchmarks for screening purposes. If soil concentrations are less than these guidelines then the potential for human health effects is negligible. However, if soil concentrations exceed these guidelines it does not necessarily mean that unacceptable risks exist. The generic guidelines do not take into account regional or site-specific information (*i.e.*, background soil conditions) and may not be appropriate for every site or region of the country.

### 1.3 BACKGROUND

#### 1.3.1 Site Description

The Sheffield Research Farm is a seventy-two (72) hectare property located on 326 Saxon Street, in Centreville, Nova Scotia (see Figure 1, Appendix A). It is owned by AAFC, a federal agency. The Sheffield Research Farm is located approximately six kilometres (km) north of the AAFC Atlantic Food and Horticulture Research Centre, in a rural farming area. The Sheffield Research Farm property is agriculture land supporting research programs related to field crops, berry crops and orchards. The Site consists of numerous test plots, research laboratories, and administrative offices. The land use for the subject site area is considered agricultural.

# DRAFT SUPPLEMENTAL SITE INVESTIGATION

## SHEFFIELD FARM, UPPER DYKE VILLAGE, NOVA SCOTIA

Introduction  
October 1, 2013

The Provincial Property Identifier Number (PID No.) is 55046973. According to the Directory of Federal Real Property (DFRP), the property is Crown owned and the custodian is Agriculture and Agri-Food Canada (AAFC). The DFRP property identification number is 2738. Selected photographs of the Site obtained during the field program are shown in Appendix B.

### 1.3.2 Water Supply/Groundwater Usage

There are no municipal services at the Sheffield Research Farm. Water is supplied from an on-site drilled well and sanitary waste is directed to an on-site septic tank and disposal field.

### 1.3.3 Previous Environmental Studies

A listing of the chronological history of environmental investigations completed at the Supplemental Site Investigation assessment area is as follows:

- A soil sampling program was completed at the assessment area in 2004 (MGI, Feb. 2004), in the vicinity of the Former Farmhouse and associated Former Garage Building. Based on the results of this assessment, approximately 475 m<sup>2</sup> of metals impacted soil (mainly lead) was located in the vicinity of the former farmhouse and former garage buildings. The findings of this report identified that the horizontal and vertical extents of metal impacts in soil were not fully delineated.
- A Phase III Environmental Site Assessment (ESA) was completed at the assessment area in 2010 (SNC Lavalin, 2010), at the Former Farmhouse and associated Former Garage Building. Based on the results of the Phase III ESA, metals impacts (arsenic, copper, lead and zinc) in soil were delineated vertically and horizontally and the overall estimated metals contaminated soil volume was reported as approximately 475 m<sup>3</sup> (950 metric tonnes). This report recommended the complete remediation of impacted metals in soil in compliance with the applicable CCME SQGs.
- Following the Phase III ESA, a Remedial Action Plan (RAP) was prepared for the Former Farmhouse and associated Former Garage Building in 2010 (SNC Lavalin, 2010). This report recommended Best Management Practices for the Site including landscaping impacted areas to minimize dermal contact and remediation of soils exceeding site-specific target limits.

The July 2013 Terms of Reference (TOR) prepared by PWGSC and sent to Stantec noted that during the initial soil sampling program in 2004, the Former Farmhouse and Former Garage Building were still in place. The structures were removed prior to the completion of the Phase III ESA and it was unknown whether any soil disturbance or regrading of the surficial soils had taken place in the vicinity of the structures, as a result of the decommissioning activities. It was understood that if the structure foundations were removed, it was likely that previously sampled soils, and associated metals concentrations within those soils, were disturbed and may have been deposited to depths below surface grade greater than they previously existed. The TOR noted that the Supplemental Site Investigation would involve a re-evaluation of soil in the local vicinity (<10 m) of the Former Farmhouse and Former Garage Building with particular interest on the soil locations where deeper metal impacts were identified.

**DRAFT SUPPLEMENTAL SITE INVESTIGATION  
SHEFFIELD FARM, UPPER DYKE VILLAGE, NOVA SCOTIA**

Introduction  
October, 1, 2013

**1.4 SCOPE OF WORK**

Table 2 outlines the Supplemental Site Investigation sampling program which was developed based on the above mentioned information. It was assumed that conditions on the Site have not changed since the 2010 site assessment was completed. Test holes were dug by excavator.

**Table 2 Sheffield Farm, Upper Dyke Village - Work Plan**

Issue of Concern	Contaminants of Concern	Media of Concern	Number of Sample Locations	Field Work
Metals in the soil in the vicinity of the Former Farmhouse and Former Garage Building.	Metals: Arsenic Copper Lead Zinc	Soil	13	Completed 13 Test Holes to a maximum depth of 0.6 mbg with soil sampling from 0.0-0.3 mbg and 0.3-0.6 mbg
			3	Completed three Test Holes to a maximum depth of 0.3 mbg with soil sampling from 0.0-0.3 mbg
			1	Completed one Test Hole to a maximum depth of 1.2 mbg with soil sampling from 0.0-0.3 mbg and 0.9-1.2 mbg
			2	Completed two Test Holes to a maximum depth of 0.9 mbg with soil sampling from 0.0-0.3 mbg, 0.3-0.6mbg and 0.6-0.9 mbg
			4	Completed four Test Holes to a maximum depth of 2.5 mbg for field observation of backfill material in the area of the Former Farmhouse and Former Garage Building.

Notes:

- 1 mbg = metres below grade.
2. For the purposes of QA/QC, 5 blind duplicate samples were analyzed for metals from the 43 soil samples submitted to the laboratory for metals analysis.
3. Soil samples were submitted to the Maxxam Analytics (Maxxam) laboratory in Bedford, NS for metals analysis. Maxxam is a Standards Council of Canada (SCC) accredited laboratory.

# DRAFT SUPPLEMENTAL SITE INVESTIGATION SHEFFIELD FARM, UPPER DYKE VILLAGE, NOVA SCOTIA

Methodology  
October, 1, 2013

## 2.0 Methodology

### 2.1 TEST HOLE DIGGING PROGRAM

A test hole soil investigation was conducted to assess surface and subsurface soil for metals impacts at the Site. Nineteen test holes were dug for the collection of soil samples ranging in depth from 0.0 – 0.3 mbg to 0.9 – 1.2 mbg. An additional four test holes were advanced to 2.5 mbg for field observation of backfill material in the area of the Former Farmhouse and Former Garage Building. Test holes were dug on August 22-23, 2013 by Eavis Construction of Sackville, Nova Scotia, under the supervision of Stantec field personnel. Test holes were advanced and backfilled (after sampling) using an excavator, and locations dug during the 2013 Supplemental Site Investigation are presented on Drawing No. 121412659-1, in Appendix A.

During the test hole digging program, a septic system PVC line was struck and broken. This line strike occurred at approximately 9:30 am on August 23, 2013, while Test Hole 209 was being dug. According to the site drawing provided by Public Works and Government Services Canada (PWGSC), this location should not have been between the septic tank and the disposal bed; however, field observations indicate there to be errors on the previous drawings. Also, Underground Consulting Services and Nova Scotia Power had previously cleared this location for test hole digging when they were on site at 9:45 am, August 22, 2013. No septic material was released due to the broken pipe. A new section of PVC piping was installed where the broken line had been and the area was reestablished to conditions similar to before digging the test hole.

### 2.2 SAMPLE HANDLING

All samples were placed in laboratory supplied clean glass jars. The jars were placed in a cooler with ice packs for transport back to the Stantec office. To minimize the potential for cross-contamination, all sampling equipment was thoroughly rinsed after each sampling event or sample. Samples not submitted for laboratory analysis were archived for potential future analysis. Soil conditions encountered in the test holes were logged at the time of sampling and are presented on Test Hole Records, in Appendix C.

### 2.3 FIELD AND LABORATORY PROGRAM

The field and laboratory program is summarized in Table 3. Samples were submitted to the Maxxam Analytics laboratory in Bedford, Nova Scotia. Maxxam is a Standards Council of Canada (SCC)-accredited laboratory for sampling methods utilized for metals analysis, and has in-house QA/QC programs to govern sample analysis, including replicates. Laboratory certificates of analysis are presented in Appendix E.

**DRAFT SUPPLEMENTAL SITE INVESTIGATION  
SHEFFIELD FARM, UPPER DYKE VILLAGE, NOVA SCOTIA**

Methodology  
October, 1, 2013

**Table 3 Field and Laboratory Program**

Analytes	Matrix	Sample Locations	Samples Submitted	Sample IDs	QA/QC Samples			
					Original	Field Dup	Lab Dup	
Available Metals	Soil	19	42 including 5 field duplicates	TH201-1, TH201-2 TH202-1, TH202-2 TH203-1 to TH203-3 TH204-1, TH204-4 TH205-1 to TH205-3 TH206-1, TH206-2 TH207-1, TH207-2 TH208-1 to TH208-3 TH209-1, TH209-2 TH210-1, TH210-2 TH211-1 TH212-1, TH212-2 TH213-1 to TH213-3 TH214-1, TH214-2 TH215-1 TH216-1, TH216-2 TH217-1, TH217-2, TH217-3 TH218-1 to TH218-3 TH219-1 to TH219-3	TH202-2  TH204-4 TH205-2  TH208-3  TH210-2 TH211-1  TH214-2  TH217-1 TH217-2	DUP 4  DUP 1 DUP 5  DUP 3  DUP 2	Lab Dup  Lab Dup  Lab Dup  Lab Dup	

Sample locations are shown on Drawing No. 121412659-1, in Appendix A.

#### **2.4 QUALITY ASSURANCE/QUALITY CONTROL SAMPLING PROGRAM**

The QA/QC sampling was conducted on approximately 10% of parameters that were analysed. QA/QC was addressed by collecting field duplicates. The results of this testing were used to evaluate the reliability of the sampling.

# DRAFT SUPPLEMENTAL SITE INVESTIGATION SHEFFIELD FARM, UPPER DYKE VILLAGE, NOVA SCOTIA

Results of Field Investigation  
October 1, 2013

## 3.0 Results of Field Investigation

### 3.1 STRATIGRAPHY

The shallow soil samples were collected from various depths between 0.0 to 1.2 m<sup>b</sup>g from 19 test holes, and an additional four observation test holes were advanced to 2.5 m<sup>b</sup>g. The overburden around the Former Farmhouse and Former Garage Building generally consisted of an organic surface layer with brown or whitish silty sand with some/trace clay, gravel or cobbles with some areas containing demolition debris from the former buildings. Bedrock was not encountered during the 2013 Supplemental Site Investigation test hole digging program.

### 3.2 PRELIMINARY SITE EXPOSURE SCENARIO ASSESSMENT

Based on the current use of the Site, the Agricultural CCME SQGs for the Protection of Environmental and Human Health are appropriate.

### 3.3 LABORATORY ANALYSIS RESULTS FOR SOIL

### 3.4 METALS IN SOIL

Laboratory analytical results for metals in soil are presented in Table D-1, Appendix D. Soil metal concentrations exceeded the CCME Agricultural SQGs for one or more metals in 15 of the 42 soil samples submitted (including one of the field duplicates).

### 3.5 QUALITY ASSURANCE / QUALITY CONTROL DISCUSSION

QA/QC sampling consisted of the collection and analysis of approximately 10% of the samples for quality control. This program permits the evaluation of the representativeness of the samples. The laboratory has also submitted their own duplicate samples to ensure their own quality control.

**Table 4 - Metals Concentrations in Soil**

<b>Soil Metal Samples</b>	
• 42 submitted including 5 field duplicates	
• 15 (including one field duplicate)	
exceeded CCME Agricultural SQGs	
<b>CCME Exceedances</b>	
• 3 for As	• 2 for Cu
• 12 for Pb	• 2 for Sn
<b>Concentration Ranges (mg/kg)</b>	
• [As] 13 - 15	• [Cu] 88 - 190
• [Pb] 72 - 370	• [Sn] 5.1 - 6.5

**Table 5 Summary of QA/QC Sampling**

Duplicate Type	Analysis	Range of %RPD	Number of Analytes within $\pm 100\%$ RPD	Acceptable Duplicate Correlation
Field Duplicates	Metals (soil)	0.0% to 133.3%	2 of 135	Yes
Laboratory Duplicates	Metals (soil)	2.7% to 30.5%	0 of 108	Yes

**DRAFT SUPPLEMENTAL SITE INVESTIGATION  
SHEFFIELD FARM, UPPER DYKE VILLAGE, NOVA SCOTIA**

Results of Field Investigation  
October 1, 2013

The guidelines for determining if a blind duplicate pair has an acceptable RPD are based on the Maxxam National Environmental QA/QC Interpretation Guide. The calculated RPD should be less than 100% for soil for individual metals parameters.

In general, the duplicate results agree closely with their corresponding samples and confirm the representativeness of the sampling procedures.

All individual parameters in the duplicates were classified the same (either above or below guidelines). The overall laboratory and field data quality is considered acceptable.

### **3.6 CONTAMINANT DISTRIBUTION**

#### **3.6.1 Metals in Soil**

The magnitude of soil metals impacts exceeding CCME Agricultural SQGs is presented on Drawing No. 121412659-2, in Appendix A, as well as in Table 6.

**Table 6 Magnitude of Impact - Metals in Soil (Based on CCME Agricultural SQGs)**

Parameter	CCME Agricultural SQGs (mg/kg)	# of Samples Exceeding Criteria	Exceedance Factor	Trends
As	12	3	Up to 1.3 x	Soil arsenic concentrations exceeded the CCME Agricultural SQG in three samples (TH216-1, TH216-2 and TH217-2). At all other locations arsenic was not detected or was equal to or less than 12 mg/kg.
Pb	70	12	Up to 5.3 x	Soil lead concentrations exceeded the CCME Agricultural SQGs in twelve samples (TH201-1, TH203-1, TH206-2, TH210-1, TH210-2, TH211-1, TH213-1, TH214-1, TH214-2, TH215-1, TH216-2 and TH217-2. Generally, the highest concentrations of lead were reported in TH206-2, TH211-1 and TH214-1 which are located in the footprint of the Former Farmhouse and south of the Former Farmhouse.
Cu	63	2 including 1 field duplicate	Up to 3.0 x	There were two exceedances of copper at sample location TH217 (field duplicate of TH217-1, and TH217-2). Copper exceedences were not observed at any additional locations and are believed to be localized near the west side of the Former Garage Building footprint.
Sn	5	2	Up to 1.3 x	There were two exceedances of tin, one at the northern border of the Former Farmhouse location (TH203-1) and one at the northern border of the Former Garage Building location (TH213-3). Tin impacts were not observed at any additional locations and are believed to be localized.

**DRAFT SUPPLEMENTAL SITE INVESTIGATION  
SHEFFIELD FARM, UPPER DYKE VILLAGE, NOVA SCOTIA**

Results of Field Investigation  
October, 1, 2013

Table 7 summarises the extent of confirmed contamination associated with metals exceeding CCME SQGs in soil and identifies if additional on or off site delineation is recommended.

**Table 7 Extent of Contamination - Metals in Soil (Exceeding CCME Agricultural SQGs)**

Issue	Comment	Recommendation
Horizontal Extent of Contamination	Approximately 1,450 m <sup>2</sup> of metal (arsenic, copper, lead and tin) impacted soil above CCME Agricultural SQGs is present on-site.	Remediate and/or risk manage exist metals impacts.
Off site impacts	Based on the sampling completed no off-site impacts are expected.	None
Vertical Extent of Contamination	Vertical delineation of metals impacts in soils was achieved in most areas of the Site with the exception of between 0.3 and 1.2 mbg, southwest of the Former Garage Building.	Further vertical delineation is recommended prior to remediation. Assumed depth of impacts as 1 mbg based on site conditions. Area of impacts in sub-soil is estimated based on the surface soil impacts.
Summary	Approximate volume of metal contaminated soil is 900 m <sup>3</sup> (assumed 0.30 m depth in most areas and 1.0 m in depth near the Former Garage Building).	None

**DRAFT SUPPLEMENTAL SITE INVESTIGATION  
SHEFFIELD FARM, UPPER DYKE VILLAGE, NOVA SCOTIA**

Conclusions  
September 30, 2013

## **4.0 Conclusions**

Based on the information gathered and on observations made during this investigation, the Supplemental Site Investigation has indicated the following conclusions related to metals impacts at the subject property:

- Metals impacts in soil are present on-site at concentrations above CCME Agricultural SQGs near the area of the Former Farmhouse and Former Garage Building.
- Volume of metals impacted soil on-site is estimated at approximately 900 m<sup>3</sup>; however, metals impacts in sub-surface soil (0.3-1.2 mbg) are not fully delineated southwest of the Former Garage Building.

Closure  
September 30, 2013

## **5.0 Closure**

This report has been prepared for the sole benefit of Public Works and Government Services Canada. The report may not be relied upon by any other person or entity without the express written consent of Stantec Consulting Ltd., and Public Works and Government Services Canada.

Any use which a third party makes of this report and any reliance on decisions made based on it, are the responsibility of such third parties. Stantec Consulting Ltd. accepts no responsibility for damages, if any, suffered by any third party as a result of decisions or actions made based on this report.

Some of the information presented in this report was provided through existing documents and interviews. Although attempts were made, whenever possible, to obtain a minimum of two confirmatory sources of information, Stantec Consulting Ltd. in certain instances has been required to assume that the information provided is accurate.

The conclusions and recommendations presented represent the best judgement of the assessor based on current environmental standards and on the observed site conditions. Due to the nature of the investigation and the limited data available, the assessor cannot warrant against undiscovered environmental liabilities.

The conclusions are based on results from specific testing and/or sampling locations, and can only be extrapolated to an undefined limited area around these locations. The extent of the limited area depends on the soil and groundwater conditions, as well as the history of the site reflecting natural, construction and other activities. In addition, analysis has been carried out for a limited number of chemical parameters, and it should not be inferred that other chemical species are not present.

Should additional information become available, Stantec Consulting Ltd. requests that this information be brought to our attention so that we may re-assess the conclusions presented herein. This report was prepared by James Lamond, B.Eng., P.Eng., and reviewed by Don Carey M.Sc., FGS, P.Eng.

The professional qualifications of Site Assessors, and the Senior Reviewer are provided in Appendix E.

Yours truly,

**STANTEC CONSULTING LTD.**

**Notes:**

1. RDL = laboratory's reportable detection limit
2. "<" RDL = parameter not detected above RDL
3. mbg = metres below grade
4. "-" = no guideline available
5. (Lab Dup) = laboratory QA/QC duplicate
6. DUP = field QA/QC duplicate
7. CCME = Canadian Council of Ministers of the Environment Soil Quality Guidelines (SQGs) for the Protection of Environmental and Human Health (CCME Online, 2013)
8. **Bold & Underlined** = parameter concentration exceeds the applicable guideline
9. *Italics and Underlined* = parameter RDL exceeds the CCME (CCME Online 2013) Agricultural guidelines for soil

Site Location: SHEFFIELD FARMS  
Your C.O.C. #: ES773313

**Attention: DON CAREY**

Stantec Consulting Ltd  
Dartmouth - Standing Offer  
40 Highfield Park Drive  
Suite 102  
Dartmouth, NS  
B3A 0A3

**Report Date: 2013/09/04**

**CERTIFICATE OF ANALYSIS**

**MAXXAM JOB #: B3E1722**

**Received: 2013/08/26, 13:13**

Sample Matrix: Soil

# Samples Received: 48

Analyses	Quantity	Date Extracted	Date Analyzed	Laboratory Method	Method Reference
Metals Solids Acid Extr. ICPMS	44	2013/08/29	2013/08/30	ATL SOP 00058	Based on EPA6020A
Metals Solids Acid Extr. ICPMS	4	2013/09/04	2013/09/04	ATL SOP 00058	Based on EPA6020A

**Remarks:**

Reporting results to two significant figures at the RDL is to permit statistical evaluation and is not intended to be an indication of analytical precision.

\* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.

**Encryption Key**

Please direct all questions regarding this Certificate of Analysis to your Project Manager.

### Quality Assurance Report (Continued)

Maxxam Job Number: DB3E1722

QA/QC Batch Num Init	QC Type	Parameter	Date Analyzed yyyy/mm/dd	Value	Recovery	Units	QC Limits
3331953	DLB	Method Blank	Acid Extractable Molybdenum (Mo)	2013/09/04	ND, RDL=2.0	mg/kg	
			Acid Extractable Nickel (Ni)	2013/09/04	ND, RDL=2.0	mg/kg	
			Acid Extractable Rubidium (Rb)	2013/09/04	ND, RDL=2.0	mg/kg	
			Acid Extractable Selenium (Se)	2013/09/04	ND, RDL=1.0	mg/kg	
			Acid Extractable Silver (Ag)	2013/09/04	ND, RDL=0.50	mg/kg	
			Acid Extractable Strontium (Sr)	2013/09/04	ND, RDL=5.0	mg/kg	
			Acid Extractable Thallium (Tl)	2013/09/04	ND, RDL=0.10	mg/kg	
			Acid Extractable Tin (Sn)	2013/09/04	ND, RDL=2.0	mg/kg	
			Acid Extractable Uranium (U)	2013/09/04	ND, RDL=0.10	mg/kg	
			Acid Extractable Vanadium (V)	2013/09/04	ND, RDL=2.0	mg/kg	
			Acid Extractable Zinc (Zn)	2013/09/04	ND, RDL=5.0	mg/kg	
RPD [SU5001-01]		Acid Extractable Aluminum (Al)	2013/09/04	3.0	%		35
		Acid Extractable Antimony (Sb)	2013/09/04	NC	%		35
		Acid Extractable Arsenic (As)	2013/09/04	24.9	%		35
		Acid Extractable Barium (Ba)	2013/09/04	NC	%		35
		Acid Extractable Beryllium (Be)	2013/09/04	NC	%		35
		Acid Extractable Bismuth (Bi)	2013/09/04	NC	%		35
		Acid Extractable Boron (B)	2013/09/04	NC	%		35
		Acid Extractable Cadmium (Cd)	2013/09/04	NC	%		35
		Acid Extractable Chromium (Cr)	2013/09/04	NC	%		35
		Acid Extractable Cobalt (Co)	2013/09/04	NC	%		35
		Acid Extractable Copper (Cu)	2013/09/04	15.5	%		35
		Acid Extractable Iron (Fe)	2013/09/04	4.9	%		35
		Acid Extractable Lead (Pb)	2013/09/04	30.5	%		35
		Acid Extractable Lithium (Li)	2013/09/04	NC	%		35
		Acid Extractable Manganese (Mn)	2013/09/04	10.4	%		35
		Acid Extractable Mercury (Hg)	2013/09/04	NC	%		35
		Acid Extractable Molybdenum (Mo)	2013/09/04	NC	%		35
		Acid Extractable Nickel (Ni)	2013/09/04	NC	%		35
		Acid Extractable Rubidium (Rb)	2013/09/04	12.1	%		35
		Acid Extractable Selenium (Se)	2013/09/04	NC	%		35
		Acid Extractable Silver (Ag)	2013/09/04	NC	%		35
		Acid Extractable Strontium (Sr)	2013/09/04	NC	%		35
		Acid Extractable Thallium (Tl)	2013/09/04	NC	%		35
		Acid Extractable Tin (Sn)	2013/09/04	NC	%		35
		Acid Extractable Uranium (U)	2013/09/04	NC	%		35
		Acid Extractable Vanadium (V)	2013/09/04	NC	%		35
		Acid Extractable Zinc (Zn)	2013/09/04	12.5	%		35

Duplicate: Paired analysis of a separate portion of the same sample. Used to evaluate the variance in the measurement.

Matrix Spike: A sample to which a known amount of the analyte of interest has been added. Used to evaluate sample matrix interference.

Spiked Blank: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

NC (Matrix Spike): The recovery in the matrix spike was not calculated. The relative difference between the concentration in the parent sample and the spiked amount was not sufficiently significant to permit a reliable recovery calculation.

NC (RPD): The RPD was not calculated. The level of analyte detected in the parent sample and its duplicate was not sufficiently significant to permit a reliable calculation.

**Validation Signature Page****Maxxam Job #: B3E1722**

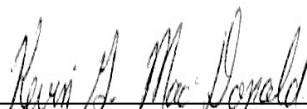

---

The analytical data and all QC contained in this report were reviewed and validated by the following individual(s).

---

Mike MacGillivray, Scientific Specialist (Inorganics)

---

Kevin MacDonald, Inorganics Supervisor

---

=====

Maxxam has procedures in place to guard against improper use of the electronic signature and have the required "signatories", as per section 5.10.2 of ISO/IEC 17025:2005(E), signing the reports. For Service Group specific validation please refer to the Validation Signature Page.
