Answers to questions in this application Request For Proposal:

Q: In request for proposals (BAP- 3-36217 folder (002)) for the purchase of a vehicle with a hydraulic platform, in technical points 4 and 5 you ask for a hybrid power system and a hydraulic power system driven by the vehicle's engine. We are not able to have both systems at the same time on the vehicle , however, we have an alternative that is :

Instead of the hybrid system you could ask for a battery system and smart charger that would feed your high performance hydraulic pump lead by electric motor (mentioned in the 2nd points of part # 4 of your statement of requirement) for the operation of the platform within the building, the system includes two 6 volt deep cycle batteries installed in a polymer protective case as well as a Kaussmal smart charger model 09-1612 with a kaussmal 091-159-30-120 auto ejection plug and a low voltage detector to allow automatic startup of the truck before the batteries are too uncharged and prevent the truck from restarting.

This system has been put to the test and is present on many of our installations and we strongly it suggest to you.

A: DRDC accepts the proposed alternative as it fulfills our requirement.
