Care should be taken by offerors to explain each question in sufficient detail in order to enable Canada to provide an accurate answer. Technical enquiries that are of a proprietary nature must be clearly marked "proprietary" at each relevant item. Items identified as "proprietary" will be treated as such except where Canada determines that the enquiry is not of a proprietary nature. Canada may edit the questions or may request that offerors do so, so that the proprietary nature of the question is eliminated, and the enquiry can be answered with copies to all offerors. Enquiries not submitted in a form that can be distributed to all offerors may not be answered by Canada.

#### **5. Applicable Laws**

The Standing Offer and any contract resulting from the Standing Offer must be interpreted and governed, and the relations between the parties determined, by the laws in force in the province of Ontario.

16. FORSEEABLE SAFETY HAZARDS

- a. Ontario Occupational Health and Safety Act R.S.O. 1990 Part III articles 29 and 30 identifies legislated compliance requirements for Canada (the Owner or Project Owner) dealing directly and indirectly with person(s), other than employees, in the workplace. The Contractor must comply with all of its responsibilities under the Ontario Occupational Health and Safety Act R.S.O. 1990.
- b. Though it is not Canada's responsibility to enforce the Ontario Occupational Health and Safety Act R.S.O. 1990, Canada intends to proactively exercise its obligation to due diligence for Health and Safety of its employees and Contractors. Prior to commencement of work, Canada will require the service provider to provide a task and site specific safety plan regardless of the service provider's obligation under the Ontario Health and Safety Act. Small service providers who are not required Provincially to complete an annual Health and Safety Program will be required to provide one as part of this requirement,
- c. Canada will identify the common medium to high risk tasks, and will provide the Contractor with a copy of their designated substances survey when applicable. Each requirement should be considered on an individual basis to establish appropriate safety requirements and due diligence. The Service provider's review and subsequent safety plan must be communicated to Canada and their employees should not be relegated to a simple "one size fits all format. Each situation must be tailored specifically in writing to the project at hand.
- d. Canada will require task specific safety plans with proof of attendance of all the service providers employees, sub contracted employees and if required Canada's effected employees having been briefed. This task specific safety plan will be based on the hazard assessment of the requirement / task.
- e. Canada's due diligence will be exercised by the Technical Authority by verifying that the service provider:

- i. Has an established and current safety program in force for all employees under contract for this requirement;
  - ii. Has complied with all applicable WSIB legislation;
  - iii. Has completed task/requirement specific safety plans and that all employees that will be on site have been briefed;
  - iv. Is providing their own supervision for safety aspects of the project.
  - v. Is performing the work in a safe manor using correct protective equipment supplied by the Contractor.
- f. If the Project Authority observes that the work is being performed in a manner that is contrary to the applicable safety legislation.
  - i. The Project Authority will identify the hazard to the service provider's responsible person, who is identified in their safety plan.
  - ii. If the unsafe work practice continues the Project Authority may stop work until the service provider can rectify the unsafe practice. No compensation will be paid to the service provider for work stoppages due to their personnel's unsafe work practices.
  - iii. Canada may require that the service provider replace personnel if those personnel are repeatedly performing unsafe work.
- g. Common Medium to High Risk Hazards - these are not an all inclusive list but are the most commonly occurring hazards. The service provider must identify all known hazards and communicate them in writing to their employees and other effected people before work commences. Under no circumstances will work proceed without an approved task specific safety plan on a project with the following hazards:
  - i. Excavation - Extreme care and planning for all excavations (manual and machine) before commencing. Any required dig permits will be the responsibility of the contractor,
  - ii. Exposures to high voltage / arc flash - many of Canada's facilities operate their own electrical distribution system which is a combination of above and below ground high voltage power distribution. Extreme care and planning must be completed when not only working directly on, or near, electrical equipment but when completing tasks that may cause planned or unplanned exposure to live electrical systems.
  - iii. Working at heights - Canada maintains various types of structures such as buildings, towers, manholes, and training facilities that require persons to be at risk of falling. Extreme care and planning must be completed on all work where there is risk of a fall. This must include not only elevated work but work at ground level (such as over a manhole or on a bridge).
  - iv. Working in confined space - Canada has many different types of confined spaces. Extreme care and planning must be completed on all projects where there is risk associated with entering a confined space. Service providers must comply with Canada's confined space access policy including entry permit process.

- 
- v. Hot work - Canada's facilities require a hot work permit for all activities listed in their Fire Hall's hot work permit process. Extreme care and planning must be completed on all projects where there is risk of personal injury or fire due to hot work. Many of Canada's facilities use a high pressure and low pressure steam for central heating purposes. Extreme care and planning must be completed on all projects where there is risk of working on steam lines or coming in close proximity.
- vi. Workings with chemicals - Many projects require the use of chemicals to complete them. Extreme care and planning must be completed on all projects where there is risk associated with the use of chemicals. Material Safety Data Sheets must be maintained on site for all chemicals. In addition to the safety issues to persons, care must be taken with regards to the chemical reaction with the surfaces it will come in contact with. Under no circumstances will service provider's chemicals be disposed of in any location or system on Canada's property.
- vii. Traffic control - In many facilities, Canada maintains its own road system and emergency services responders. Under no circumstances shall the service provider close or inhibit traffic without the appropriate approvals. This allows emergency service responders to adjust routes for emergency responses. In addition to the road networks, Canada has many high traffic parking areas and institution vehicle areas. Extreme care and planning must be completed on all projects where there is risk associated with traffic coming in contact with service provider's employees.
- viii. Requirement to lock out potential energy sources – Canada's facilities contain many potential electrical and mechanical energy sources. It is critical that the service provider investigate all potential energy sources for each project and ensures they have a process for lock out in place. Turning off a device without locking it out is unacceptable. Extreme care and planning must be used on all projects where there is risk associated with electro-mechanical energy sources.
- ix. Other – at the time of work, if there is other, and there are many known hazards, the Project authority and the service provider will agree on what they are and ensure the hazard are covered in the work site specific safety plan.

17. APPLICATION FOR VARIANCE

- a. Contractors and Subcontractor may request a variance, in unusual circumstances, whenever regulations are considered contributory rather than preventive in nature to achieving the aims of our safety program. The decision to approve/disapprove the variance will be made by the General Safety Officer and will be binding.
- b. Variances to local CFB Trenton safety regulations can only be approved or disapproved whenever the CFB Trenton regulations are deemed more stringent than the minimum requirements.
