This amendment is raised to address questions submitted to PWGSC by potential bidders. These questions appear in their original language and format. Each question has been reviewed by the technical Authority and the answers provided are in Bold.

Q1) Could you please kindly specify the hardness (i.e. Material, 314SS or 316SS or ...) of the disks (i.e. tags) being used?

A1) The discs are SS123 and the material thickness is .035, with a +/- .002 variance.

Q2) In 6. TECHNICAL SPECIFICATIONS, item g, its required that machines must be capable of laser etching at a minimum of 10%-20% depth in stainless steel to ensure that characters are clearly identifiable; you are asking for a laser

A. If using a fiber laser we can get the contrast but not the depth (The fiber laser brings out the carbon in the SS to give a permanent black mark,)

B. If using a Yag laser we can get the depth but not the contrast (The yag laser will burn into the material but there is small color contrast between the depth and surface.

A2) Depth is more important than contrast. Depth will ensure that the text will not scratch or wear off which would be essential for the requirement to identify a soldier. The discs must be legible after experiencing extreme heat and pressure (ie explosion, vehicle fire).

Q3) Could you please kindly specify if possible the thickness of the disks (i.e. tags) being used?

A3) As per the TA, The exact thickness of the ID discs is .035" with a variance of .002".

ALL REMAINING TERMS AND CONDITIONS ARE UNCHANGED
