Amendment 003 is raised to address questions 002 – 004 received from Industry as follows:

Question 002:

Can the Crown/CCG describe the Emergency Support Functional Roles by category of the individuals that will be utilizing the system to provide data inputs and/or receive mission critical information?

As we currently understand, in the RFI Section 4, bullet b states that ICS IMS is to be implemented in "all regions and at CCG/DFO headquarters ". We would like to validate if you are planning to run multiple operational centres that will concurrently provide and share information across participating agencies?

Response 002:

The intent is to have one standing operations centre at Headquarters (HQ) in Ottawa (HQ) and a back-up site elsewhere, with the application accessible across the country. As required, additional temporary operations centres may be set-up as needed including, but not limited to, the incident site (Incident Command Post), a regional centre or elsewhere.

Question 003:

Can the Crown/CCG confirm that it is a core priority objective to incorporate an ICS software system and a Geographic Information System (GIS) based display to provide a common operating picture and situational reporting and making it available to command locations, field personnel and operations centres in near real time?"

Response 003:

The priority is that the ICS can "talk" or interact with our existing common operating picture (COP) GIS system. If it has a GIS Display (GISD) incorporated in the software, it would be acceptable as long as it can "talk" to the existing COP.

Question 004:

Section 5 of the document outlines Operator and Maintenance training requirements for the ICS IMS. Understanding that the CCG has an in place training management system, we request that the Crown verify that the actual management of the training and associated support functions to conduct and manage training is not expected to be part of the core ICS IM solution. If so, please confirm that the training data related to personnel qualifications will be made available to the ICS IM system so that the ICS IM system can support the functions requested which including reporting the qualifications of personnel to be employed during an incident.

Response 004:

This is to confirm that CCG will input, manage and extract the training and qualification information to/from the IM System. CCG seeks a system that is capable of storing this information as well as a tracking/management program that will be administered by CCG personnel.

In short, CCG requires that the IM application provides us with the capability of having one or more of our applications link to it for the purpose of updating and reading data from its database.
