**Amendment No. 004**  
**Solicitation No. EN869-141670/A**  
**Occupational Safety and Health E-Learning Solution (OSHELS)**

The purpose of this amendment is to respond to a question relating to this bid solicitation as detailed in Section A.

**SECTION A - QUESTIONS AND ANSWERS**

#	Question	Answer
6	Ref: Soicitation Amendment #2, Question and Answer #3: We would kindly request that PWGSC reconsiders the reference requirements to include migrations out of Content Server and leverage the Demonstration requirement of Section 1.8 to substantiate and confirm compliance.	Canada has a requirement to migrate documents to Content Server, and would like to evaluate the Bidder's experience in doing the same. The current requirement does not include migration of documents from Content Server. Therefore, the requirement shall remain the same.
7	<p>Ref: Bid Solicitation Section 2.6, entitled "Improvement of Requirement During Solicitation Period", we would like to recommend that Canada add the following to the bid requirements:</p> <p>The product must be scalable and extendable to obtain maximum performance in any environment.</p> <p>The OpenText eDOCS API should be used to extract all content, meta-data, permission sets, and other supporting objects.</p> <p>The product must have the ability to execute a migration process that occurs over an extended period of time, typically during off-peak hours. This process will allow users to continue to work in eDOCS and File System during the production migration process, while ensuring any changes made to eDOCS and File System objects that have already been migrated are updated in Content Server.</p> <p>The product should have the ability to save commonly used resources (meta-data mappings, permission mappings, custom scripting, etc.) as templates that can be reused within other migration rules.</p>	The current SOR is a comprehensive list of the functionality required by the requested FDMSSS. The recommended additional requirements have been considered and the Statement of Requirements shall the same.

Extend M-1 to include ability to select source eDOCS items by multiple methods. Source object selection should be able to be made from any of the following eDOCS items:

File Plan Nodes  
Public Folders  
Workspaces  
Quick Searches  
Dynamic Views  
Profile Searches  
List of files

In addition to document content, the following eDOCS items should be available for crawling and migrating to Content Server:

Folders  
DV Hierarchy Nodes  
Versions  
Permissions  
Meta-data  
Related Documents  
Document History  
Where Used  
Physical Records or Paper Profiles

The product should include duplicate process detection and multiple options for handling duplicate content.

The product must be able to reprocess objects with errors. This allows for only the documents that had an error to be reprocessed, removing the need to re-run an entire content set for just a few documents that had errors.

Rollback features should be an included option in the product. This allows for all documents processed from a given migration run to be rolled back and removed from Content Server. This is critical requirement for all migrations as it allows for increased manageability of the migration process, results in overall better throughput and results, and allows for easy test runs to validate the content and all related objects before and during the production migration.
