Name and title of person authorized to sign on behalf of Vendor/Firm (type or print) Nom et titre de la personne autorisée à signer au nom du fournisseur/ de l'entrepreneur (taper ou écrire en caractères d'imprimerie)	
Signature	Date

This amendment is raised to publish all answers to the questions received as of August 26, 2014.

- Q.1 As some manufacturers no longer support EMCCDs and are offering an alternative with scientific sCMOS sensors operated in low noise mode in order to achieve sub electron read out without the excess noise factor from the electron multiplication – or – are offering the much faster gating image intensified ICCD cameras,
would be please kindly let us know if you will also consider alternative solutions which meet or exceed the requirements of the solicitation in a manner of sCMOS sensors , ICCD cameras , etc?
- A.1 Our project is pursuing an evaluation of a particular technology (EMCCD based). There's an experimental (speckle imaging) and operations testing (general space surveillance) application. The majority of the work that will be performed will be very low light level measurement on compact objects (speckle imaging of faint objects). Your suggestion was welcome, however we're pursuing EMCCD based approach at this time.

All other terms and conditions remain unchanged
