9. TERMINATION FOR CONVENIENCE

- 9.1 Notwithstanding anything contained in the Contract, the Minister may, at any time prior to the completion of the Work, by giving notice to the Contractor (termination notice), terminate the Contract as regards all or any part of the Work not completed. Upon a termination notice being given, the Contractor shall cease work in accordance with and to the extent specified in the notice, but shall proceed to complete such part or parts of the Work as are not affected by the termination notice. - 9.2 In the event of a termination notice being given pursuant to subsection 9.1, the Contractor shall be entitled to be paid, to the extent that costs have been reasonably and properly incurred for purposes of performing the Contract and to the extent that the Contractor has not already been so paid or reimbursed by Canada:

- 9.5 In the procuring of materials and parts required for the performance of the Contract and in the subcontracting of any of the Work, the Contractor shall, unless otherwise authorized by the Minister, place purchase orders and subcontracts on terms that will enable the Contractor

to terminate the same upon terms and conditions similar in effect to those provided in this section, and generally, the Contractor shall co-operate with the Minister and do everything reasonably within its power at all times to minimize the amount of Canada's obligations in the event of a termination under this section.

- 9.6 The Contractor shall have no claim for damages, compensation, loss of profit, allowance or otherwise by reason of, or directly or indirectly arising out of, any action taken or termination notice given by the Minister under this section, except to the extent that this section expressly provides.

10.1.2 the Contractor fails to perform any of its obligations under the Contract, or in the Minister's view, so fails to make progress as to endanger performance of the Contract in accordance with its terms.

10.2 If the Minister terminates the Work in whole or in part under this section, the Minister may arrange, upon such terms and conditions and in such manner as the Minister deems appropriate, for the Work to be completed that was so terminated, and the Contractor shall be liable to the Minister for any excess costs including additional costs relating to the completion of the Work.

10.3 Upon termination of the Work under subsection 10.1 the Minister may require the Contractor to deliver and transfer title to the Minister, in the manner and to the extent directed by the Minister, in any finished Work which has not been delivered and accepted prior to such termination and in any materials or work-in-process which the Contractor has specifically acquired or produced for the fulfilment of the Contract. The Minister shall pay the Contractor for all such finished Work delivered pursuant to such direction and accepted by the Minister, the cost to the Contractor of such finished Work plus the proportionate part of any fee fixed by the Contract and shall pay or reimburse the Contractor the fair and reasonable cost to the Contractor of all materials or work-in-process delivered to the Minister pursuant to such direction. The Minister may withhold from the amounts due to the Contractor such sums as the Minister determines to be necessary to protect the Minister against excess costs for the completion of the Work.

10.4 The Contractor shall not be entitled to be reimbursed any amount which, taken together with any amounts paid or becoming due to the Contractor under the Contract, exceeds the Contract price applicable to the Work or the particular part thereof.

- 10.5 If after the Minister issues a notice of termination under 10.1, it is determined by the Minister that the default of the Contractor is due to causes beyond the control of the Contractor, such notice of termination shall be deemed to have been issued pursuant to 9.1 and the rights and obligations of the parties hereto shall be governed by section 9.

11. RECORDS TO BE KEPT BY CONTRACTOR

- 11.1 The Contractor shall keep accounts, invoices, receipts, vouchers, records and all other documents of the cost of the Work and of all expenditures or commitments in a manner and to the extent sufficient for audit purposes to the satisfaction of the Minister. - 11.2 The Contractor shall provide facilities for audit and inspection purposes and shall provide the Minister with such information as requested by the Minister for those purposes.
- 11.3 The Contractor shall not dispose of any such accounts, invoices, receipts, vouchers, records or other documents without the prior written consent of the Minister and shall preserve and keep them available for audit and inspection by the Minister to his satisfaction, for a six (6) year period plus current year, following completion, termination or suspension of the Work.

Should an interest be acquired during the life of the contract that would cause a conflict of interest or seem to cause a departure from the principles, the Contractor shall declare it immediately to the Minister.
- 12.3 It is a term of this contract that any persons engaged in the course of this contract and subsequent to it shall conduct themselves in manner such that there is not and will not be any conflict arising from competing or opposing interests of other clients of the Contractor. APPENDIX “C”

STATEMENT OF WORK

Title

Synthesis of Bluefin Tuna Pop-Up Satellite Archival Tagging Study Data in Support of Spatially Explicit Movement Models for the 2015 Stock Assessment.

Introduction

Fisheries and Oceans Canada (DFO) has a requirement for a contract that will primarily support scientific labour costs associated with the analyses of the satellite archival data and the generation of movement tracks for the tagged fish (which total about 350 tags). The work will also involve a synthesis of the results and the description of the movements of Bluefin tuna along the Atlantic seaboard.

The use of satellite archival tags has become an important means for tracking large pelagic fish. Both Canada and the USA have conducted several programs of tagging of Atlantic bluefin tuna (ABFT) since 1999. ABFT support an extremely high profile fisheries resource that is under close scrutiny because of the value of the fishery and with its recent listing as “Endangered” by the Committee on the Status of Endangered Wildlife in Canada (COSEWIC). The responsible agency for management of bluefin tuna, International Commission for the Conservation of Atlantic Tunas (ICCAT) plan a major stock assessment in 2015, and for the first time, will be incorporating movement information (such as derived from satellite archival tags) into the assessment. There is, therefore, an urgent need to assemble the available tagging results, analyse them using a consistent methodology, and synthesize the results in advance of the stock assessment.

Background

Mixing between the two stocks of Atlantic bluefin tuna (ABFT) is considered one of the most important problems facing the development of robust stock assessments for this iconic and high profile species. A major component of the available data that could help resolve stock mixing is the results of electronic tagging studies conducted by various research teams, including Canada’s IGS-funded deployments on Atlantic bluefin tuna. Pooling and analyzing the available tagging information from all sources is the best approach to provide return on investment of the millions of dollars spent on vessel charters, tags, and personnel costs over the years. The contracted work will synthesize all available information from three labs in Canada and the USA to describe migration paths, investigate inter-annual patterns, environmental associations, and examine evidence for spawning site locations. The intention is provide the most comprehensive summary of electronic tag data available, thus improving the basis for an upcoming stock assessment of bluefin tuna in 2015.

Since 1999, electronic tagging studies have contributed spatially resolved information on movements, behaviour and oceanographic associations of ABFT. Having explicit information on rates of

movement and the vertical and horizontal extent of exploited species in relation to fisheries has importantly, but until recently, there has been little accomplished on the integration in stock assessment. In this contract, funds obtained from DFO's International Governance Strategy will be used to synthesize movements and oceanographic associations of ABFT from tagging studies in Canada and the USA to support the incorporation of more spatially explicit structure and movements into stock assessments. Pooling data among various Western Atlantic research teams is a first for ABFT and represents a critical effort in providing the best available fisheries-independent data in support of the 2015 International Commission for the Conservation of Atlantic Tunas (ICCAT) assessment.

Data returned by electronic tags can be used to estimate dispersal rates and types of movement of different year classes of ABFT, utilization of ocean biogeographic regions, and identification of potential spawning habitats. Recent electronic tagging studies (Wilson et al. 2005; Sibert et al. 2006; Galuardi et al. 2010; Stokesbury et al. 2011; Vanderlaan et al. 2011; Galuardi and Lutcavage 2012) have identified dispersal patterns, behaviour, survivorship, and environmental associations of ABFT in the Canadian Exclusive Economic Zone, Gulf of Maine, and contiguous regions. Results have revealed complex movements by adults, annual homing to foraging grounds, and the strong possibility of multiple spawning areas with possible size structure for western contingents. Sensitivity analyses from the most recent ABFT stock assessment indicated the Canada's southern Gulf of St. Lawrence index of abundance as one of the most influential on estimates of spawning stock biomass, even against highly restricted control measures there (e.g., one fish per license per season). Juvenile movements show strong association to the shelf and Gulf Stream margin and have not yet depicted transfer to the east, as predicted from micro-constituent and biomarker studies. The contracted work integrates tag data from multiple research teams to provide the most consistent and complete record available across national boundaries in the western Atlantic.

Contract Dates

The intent is to establish a contract for a period of date of award to March 31, 2016.

Requirements

The Contractor must assemble an Atlantic bluefin tuna (ABFT) tag information system with data obtained during 2005-2012. The contractor must have access to PSAT data residing with (but not limited to) the following sources: the Department of Fisheries and Oceans Canada (DFO), Acadia University, Canada (Dr. Mike Stokesbury), and the Large Pelagics Research Center (LPRC). Such integration will provide multi-year, multi-size class ABFT coverage for electronic tagging efforts in the Western Atlantic, utilizing returned data from over 350 tags.

The Contractor should use a versatile relational data model, such as that developed by Lam and Tsonos (2011) designed specifically to accommodate electronic tag data. The goal is to allow a high degree of flexibility in preparing and packaging data for inputs into stock assessment and other analytical models, either through direct connectivity through a common database protocol or text file export. This ensures a consistent data workflow across various datasets for assessment and analytical models.

Electronic tags rely on light-based geo-location to estimate horizontal movement tracks in which the accuracy can be improved via statistical approaches. The contractor should utilize a number of state-

space modeling techniques with the Kalman filter estimation with sea-surface temperature (Lam et al. 2008; 2010) and bathymetric correction (Galuardi et al. 2010). Individual tracks for all electronic tags will be processed and assimilated back into the relational database.

The results of the proposed work will be submitted to the scientific authority in standard scientific publishing format so that they are ready for internal and external scientific peer review, and eventual publication in the primary literature. The products of the contract must include use of appropriate statistical analyses, and sound rationale for their use.
