Solicitation Amendment # 006 is issued to:**1) Respond to the questions # 023 to 024 below from industry:****Question # 23**

Questions pertaining to Industry Canada Certification.

RSS-181 relates to both Transmitter and Receiver, but the tender seems to vary when discussing this. Annex B - TSOR - Section 3.1.2.1 states "The system shall meet the recent version of the following..." This includes RSS-181 and Safety Code 6 (2009). It then goes on to say section 3.1.3.1 that only the Transmitter shall be demonstrated to meet RSS-181.

Question # 023 A)

Annex B - TSOR - paragraph 3.1.3.1 - Can you please clarify what is meant when you say "delivery of the Transmitter shall be demonstrated to meet RSS-181"?

Response # 023 A)

The statement in 3.1.3.1 is correct as written. This means that the manufacturer of the equipment (i.e., the transmitters) must have obtained Industry Canada certification for RSS-181 by the time it is shipped to the Crown.

Question # 23 B)

Do the Transmitter and the Receiver both require Industry Canada Approval?

Response # 23 B)

Only the transmitters require RSS-181 certification. If the receivers meet the requirements specified in the TSOR, Paragraph 3.1.6.4.2, they will meet the requirements of RSS-181.

Question # 23 C)

RSS-181 calls for compliance with H3E full carrier single side band. This has now been made obsolete by IMO and ITU (annex attached A1/5.10), so is that really required now?

Response # 23 C)

The test methods in RSS-181, Paragraph 6.2 and sub-paragraphs are only an outline of how to measure the H3E signal if used. It does not mandate that the device incorporate an H3E

modulation mode. If the device does not use H3E then testing as per 6.2 for H3E is not applicable and would not be on the certificate issued for the device. Only the modulation modes used for the DSC system would be tested.

Contract delivery time lines.

Question # 24

In solicitation amendment # 004, your response to Question #009 is: For bid purposes, the required timeframe for equipment installation is during the non-operational period from 1 January to 30 April, with the equipment to be operational no later than 1 May. In addition, the bidder may propose an alternate installation period for CCG consideration. Are you suggesting that you would like the installation in 2015? Manufacturing lead times on many of the components would not be able to accommodate this timeframe. Can you please clarify?

Response # 24

The reason the year was left blank was that manufacturers may have different lead times or equipment deployment proposals that would ideally allow for installation in 2016. The equipment is to be installed and tested no later than 30 April, 2017.

All other terms and conditions remain unchanged.
