Solicitation Amendment # 008 is issued to:**1) Respond to question # 026 below from industry:****Question # 026**

Annex B - TSOR Section 3.1.6.4.1 states that “the DSC receivers (watch keeping receivers) can be either scanning or dedicated...”. We have taken that to mean that a scanning watch receiver may be used, provided that it is operated in fixed frequency mode only. Should a scanning watch receiver be used in scanning mode it would not meet the international DSC requirements since a 20 dot pattern DSC call (e.g. Individual DSC Call to coast station from a ship) would not stop the scanning watch receiver and therefore it would be missed by system and the operators.

Can you please clarify?

Response # 026

It is expected that a dedicated scanning DSC watchkeeping receiver will only be scanning the fixed HF-DSC channels. Scanning watchkeeping receivers are allowed under ITU-R M.493-13 therefore they would be expected to meet the system requirements specified in ITU-R M.493-13 and the operational requirements specified in ITU-R M.541-9.

All other terms and conditions remain unchanged.
