This Solicitation Amendment 002 is raised to answer the following bidder' question:

Q4. According to 3.8.4 (g) of the specifications, the variable height deck raises 537mm (21"), and according to 3.8.2 (b) "variable height deck length 7.3m" & (c) "total working deck length 12m." Does (c) "total working deck length 12m" mean when the 7.3m deck is in the raised position, it is the same height as the tridem bridge, and the bridge length is then included in the total working deck length?

A4. Yes, when the 7.3 m deck is raised to the highest position it will be level with the tridem bridge, extending the total working deck length.

Q5. In 3.8.7 (c) it states that "an antler system is the preferred design" for the adjustable height gooseneck locking mechanism. Please define what is meant by "an antler system."

A5. The "antler system" is a mechanical locking system used for safety and to secure the deck while it is operates at the various heights. This system must be capable of holding the maximum payload at all various deck heights.

Q6. In 3.8.4 (e) "Two hinged bridging plates....these plates will allow wheeled vehicles to access the rear of the trailer, when the main deck is in its highest position..." Please define the wheel loads.

A6. The minimum requirement for each wheel load would be 5000 kg

ALL OTHER TERMS AND CONDITIONS REMAIN UNCHANGED.
