

	Question	Answer
1.	Is the final day for submitting questions October 10 (i.e. 10 days before closing) or October 3? The first paragraph under Part 1 says both.	The correct date to submit questions/enquiries is Friday, October 10, 2014 not October 3, 2014.
2.	Section 5.0 of Appendix A refers to on site visits of applicable wastewater systems and their associated collection systems. Will EC facilitate or conduct initial communications with the systems owners or operators, for the purpose of acquiring permission for the Contractor to visit the facilities, or is the Contractor responsible for these communications?	The contractor is responsible for these communications.
3.	For proposal preparation purposes, can EC confirm the number of active wastewater discharge permits in each marine area listed in Section 1.0 of Appendix A?	This is not information that is readily available to EC and should therefore be determined by the contractor.
4.	Section 9.0 of Appendix A identifies a 4 week period (i.e., weeks 6 to 9) for MIKE 3 modelling that ends with generation of "draft impact boundaries". The 4 week schedule is likely insufficient for development of calibrated models for each of the three non optional areas proposed for fiscal year 2014/2015. Can the impact boundaries be defined using un calibrated MIKE 3 models?	After advice from our engineer, Jeff, the simple answer is we would need the FINAL impact boundaries to include a calibrated model. If they are suggesting using uncalibrated results for the DRAFT impact boundaries, we would need to get clarification on what they interpret calibration to be.
