ENVIRONMENT CANADA HAS PROVIDED A RESPONSE TO THE FOLLOWING SUBMITTED QUESTIONS:

Q1. We would like to make an enquiry regarding the following sections.

In the Purchase Description.

Section 2.1 - General Specification.

Section 7 - Materials of Construction

Section 2.1:

- All piping system components shall be manufactured from SS316 or a higher grade stainless steel.
- Pumps and media modules shall be manufactured from Duplex 2205.

Section 7:

- Materials of Construction:
 - o Isolation Valves (Hi Press) Cleaning Valves: 100 PSIG, 316 SS body, TFE seat PVC, socket ends, with hand lever.
 - o Ball Valves – Low pressure: PVC body and ball / Buna-N seats
 - o Sample Valves – Low pressure: PVC body and ball/ Teflon seats

We would like to enquire why PVC valves have been chosen for the 316 SS piping system.

Is there a reason for this material selection of the valves? If there is a reason, would it be possible or applicable using the same rationale to utilize the following material substitutions...

- PVC piping system to replace the 316 SS piping system
- HDPE tanks to replace the Duplex 2205 tanks.

If the substitutions are not possible, and would eliminate us from consideration please advise and the substitutions will not be considered further.

A1. The goal is to minimize the exposure of water to plastics to reduce the adsorption of organic components by the walls. Pipes and tanks must be metal. Valves can be plastic as their contact with water is minimal.

Q2. Pre-treatment tank T-1 does not show any level floats, how to prevent dry running of the pump?

A2. Preliminary treatment of water will be optional and separate from the adsorption process. The preliminary treatment unit will be operated manually in a batch mode. An operator will be monitoring water level in the tank visually.

Q3. Please be advised that we are having difficulty in sourcing the pumps specified in this package. Might there be a manufacturer or model # we can refer to for this specification for the 3 pumps?

A3. Pump specifications are recommended but not mandatory. Bidders are encouraged to identify and propose the pumps whose characteristics are similar but not necessarily the same.
