**Solicitation Amendment is being issued to address the following Questions & Answer:**

**Q1:** Section 3.3.7 of Annex A states, "The winch must swivel 360 degrees on the mounting base." Could you please provide some additional detail about this requirement? For example, are you expecting the winch orientation to be actively controlled (during operation)? Or can it be manually positioned and dogged or bolted into place prior to operation?

Is the winch required to rotate under load? And if so, would the fleet angle change while rotating? Are you anticipating damping or braking of the rotation? Please describe the concept of operations.

**A1:** The concept is that the winch can be rotated on the base to align with the sheave. Once the winch is manually aligned and "dogged" in position. It will remain in position during winch operations.
