Amendment #2

The following are bidder questions and subsequent responses from the technical authority:

Question 1: Annex a 1.1 headstock. (a) in brackets it states this lathe is a non- gap bed. Is it correct that they do not wish to have a gap in the bed?

Response: There is no gap in the bed.

Question 2: Annex a 3. G. Wear compensation: reversible lead screw. Do they want to reverse this when it wears?

Response: Wear compensation means, that the lead screw pitch being used to a machine particular thread lead selected in any range of the gear box does not change over the life time usage of the lathe i.e. a selected pitch of 1.0mm new is 1.0mm is at the end of the lathe's machining life. Reversible means the lead screw direction can be changed on the head stock gear box to be either left or right direction in relation to the lathe spindle direction of rotation.

All other terms and conditions remain unchanged.
