**TITLE : TWO COLOR PULSED LASER
AMENDMENT 001**

Included in the present amendment :
- Questions and answers 1 and 2

Question 1 : "Pulse repetition rate: Up to 30 Hz' spec", therefore is it acceptable to have a pulse rep rate limited to 10Hz?

Answer : A repetition rate limited to 10Hz is not acceptable. It needs to be variable between 0 to 30Hz minimum.

Question 2 : Are you at liberty to describe your application bit more in details? If so please tell us so that we may offer a suitable, cost-effective solution.

The mandatory specs / details are quite clear from specification perspective.

Now, and since the laser requested is of high energy. Therefore, making it very rare to find.

As such it is not part of the mainstream commercial ones. Therefore, a bit more explanation in regards to what / how the application is, will help us in identifying the best possible laser available and that from both aspects, the specs & the application.

Answer : The laser will be mounted in a system that will be used inside and outside. We already have the optics to manipulate the output of the laser. The energy and pulse rate will be adjusted for a series of measurements and the laser pulses will be synchronised with the rest of the system by the external trigger (in the requirements).

*** All the other clauses and conditions remain unchanged ***
