2011-08-12

- Choice of high strength aluminum or Stressproof® steel bodies
- Turbine flow measurement
- Flow accuracy $\pm 1\%$ of full scale
- Repeatability $\pm 0.2\%$
- Pressures up to 6000 PSI (414 Bar)
- Temperatures up to 300 °F (150 °C)
- Optional IFC converter provides analog output

Flo-tech's Classic Turbine Flow Sensors measure the flow rate of hydraulic fluids and other compatible liquids. Offered in a choice of high strength anodized aluminum or Stressproof® steel bodies, these durable flow sensors are capable of withstanding pressures up to 6000 PSI (414 Bar).

The Classic Series with the standard magnetic pick-up provides a frequency signal that is proportional to flow rate and can be transmitted to Flo-tech's F6600/F6650 Series digital displays. If an analog output is preferred, these sensors are also available with the IFC (Intelligent Frequency Converter) which offers either a 4-20 mA or 0-5 VDC output signal, allowing easy integration with Flo-tech's F6700/F6750 Series digital displays, PCs, PLCs or other data acquisition devices.
