Question:

I visited Bowden Penitentiary Sub Station yesterday to verify dimensions and layout. I would like to enquire about the new pad in Room 101 Diesel Fuel Storage room.

When the pad is poured , the General Contractor would have to wait for compressive strength before we insert the new tank back into Room 101. This would add time to project, and cost of rental tanks on site. Upon inspecting the floor on my visit, the concrete was in excellent shape, is the pad necessary? Would it be possible to put this question before your consulting engineer?

Answer:

The pad is required for three reasons:

- a) If the new tank assembly (including the skid it is brought in on) is large enough that it needs the space currently occupied by the floor drain & pit near the door, that pit will need to be infilled before the tank is installed . The contractor will have to wait for the infill to cure in this case.
- b) The pad is there to make cleaning the room easier.
- c) If any water gets on the ground in the room, the pad reduces the likelihood of the skid rusting.

The pad can not be removed from the scope of work.
