

Projectors CIC 25 Forks Market Rd.

CIC has 3 projectors and one screen redirection system. (Instructors screen shows one 10 workstations and the projector)

2 of the screens have 6' X 6' pull down screen and video feed by convertor boxes that use data drops.

1 has part of the wall painted flat white (8' X 12') and video feed is large shielded VGA cable.

All 3 have external speakers mounted on both sides of screen.

Video convertor box.

Two are used for each projector. One at laptop/computer end and one at projector. Use on Project 1 and 2. So 4 boxes.

Projector 1

Projector 2

Projector 3

Screen switch box:

This item (box) is used for showing things like Excel spreadsheet that are hard to read on projector screen on 10 workstation at the same time as projector screen.

Used mainly for training. The box below is mounted near instructors workstation. This setup needs extra wiring to each student workstation and a control box at each workstation. I installed this myself years ago. It is plug and play but existing cables may not be the correct lengths.
