

Question 4

For consistency in pricing, can you please clarify the length of the piles for replacement?

Answer 4

The length the piles is unknown, proponent's are required to install new piles that will be driven until refusal and take on the required load of the deck/structure above. It is up to the proponent to use expert judgement, previous experience, and any historical data to make a best judgement as to what length of pile they believe would be adequate to place new piles in accordance with the specifications.
