THIS INVITATION TO TENDER IS, HEREBY, MODIFIED AS FOLLOW

SI04 OPTIONAL SITE VISIT

Delete:

There will be a site visit on May 21, 2015 at 1:30 pm. Interested bidders are to meet at the entrance of the Archambault Institution at 242 Montée Gagnon in Ste-Anne-des-Plaines, J0N 1H0

Insert:

There will be a site visit on May 21, 2015 at 1:30 pm. Interested bidders are to meet at the entrance of Building A-2 of the Archambault Institution at 242 Montée Gagnon in Ste-Anne-des-Plaines, J0N 1H0. **See attached map.**

See questions and answers to this day in attached document

ALL OTHER TERMS AND CONDITIONS REMAIN UNCHANGED

RECEIVED QUESTIONS :

Q1 : We noticed that there is a crawlspace of approximately 3' between the bottom of the structural slab and the top of the pile. However, there is no opening nor acces to the crawlspace. When putting the formwork for the crawlspace, we are wondering how we will retrieve our équipement from the crawlspace. Will there be an access from the existing building?

A: There is no crawl space in the extension. It is a structural slab on grade.

Q2: Section 05 50 00 article 2.9.3 of the specifications mentions a "tubular section of 44mm x 44mm which can freely rotate around the steel rod", it seems as though the steel rod should be the one that is free within the section?

A: That is correct, to be clarified in addendum.

Q3: Should assembly be performed following galvanisation? The 25mm rod could potentially remain fixed following the gavanisation process.

A: In addition to the previous question, galvanisation must be performed following assembly. The interior rod must be galvanised beforehand.

Q4: The galvanisation process requires holes (+/- 2 holes per piece), are we to plug these holes after galvanisation?

A : If apparent, yes.

Q5: What are the thicknesses for the requested profiles (HSS44x44mm et HSS65x40mm)?

A: 3mm minimum, to be clarified in addendum.

Q6: Should we plan for a two-step installation, first attaching the frame to the masonry followed by the installation of the bar? Or is it possible to perform the work in a single step.

A: Two-step, to be clarified in addendum.

Q7: On some projects with security bars, the 25mm rod undergoes a treatment to increase its hardness. It does not seem to be the case in the current project, please confirm.

A: The resistance to cutting, the assaults, impact and deflection must comply with ASTM A627. To be clarified in addendum.

Q8: Page S04 refers to a temporary retaining wall. We are asked to install barbed wire at the top of said wall. It is our understanding that this wall is not connected to any other wall and/or fence, and as such do not see the usefulness of the barbed wire. Could you clarify?

A: The temporary retaining wall is continuous with the temporary construction site fence as outlined in the architecture documents.

Q9: Apart from construction workers, will there be other people accessing the work site? Are we required to plan for site fencing to secure the work area?

A: Yes, please refer to available documents.

Yes, temporary and permanent fencing are planned in civil and architecture documents. The construction site must be fully secure before beginning of work.
