## AMENDMENT 006

This amendment is issued in response to the following question.

1. For RS 1.6 Hydrology and Draining Structure Sizing Design, please clarify the intent of this requirement. Is it for drainage during construction or part of the permanent works?

Answer:

This requirement is not really required for repair work, its main intent is for work associated with the Grand Falls Fishway where there is a good chance that several pools will have to be constructed to replace the entrance way area and the attraction water rework in this area as well as the area where there is a partial blockage from the rock slide which the onsite salmon representative report that this seemed to improve the attraction flows to bring the fish in. There may also be a need to look at the work at Salmon Brook Fishway with regards to the cofferdam height and position and the possibility of adding a couple of weirs in the upper area of the fishway where the salmon trap is located.

All other terms and conditions remain unchanged.
