Amendment number 005 to Request for Proposal (RFP) W8482-156447/C which closes June 29, 2015 at 2:00 p.m. is raised to:

Provide responses to questions asked by a Bidder.

Q1. Where is the high/low pressure alarm needed? Is it needed for the input air or for the output air? If it is needed for the output air, should it be on the output header or are 3 different alarms needed for each of the three outputs?

A1. As per the initial specification, 3 controlled outputs of 2 PSI, and 1 variable output of 2 to 15 PSI. The dryer is to maintain, and will alarm if one or more parameters are not met. Pressure, humidity, etc (could be over heating), or any other alarm that would/could affect the dryer in maintaining what the original specification asked for).

Q2. Is the high/low pressure alarm needed to be adjustable or a fixed pressure alarm is needed?

A2. As per initial specification, 3 controlled outputs of 2 PSI +/- 10%, and one Variable output 2 - 15 PSI +/- 10% so alarm setting < 2psi Settable / programmable, on controlled outputs required to be 2PSI and settable / programmable on variable output of 2 to 15 PSI, being of course less than 2 psi and greater than 15 PSI. A time delay of 60 to 120 seconds would also be useful and would avoid nuisance alarms.

Q3. If a fixed pressure high/low alarm is needed, what are the set points of the high and low pressure?

A3. As per above answer 2 above. A time delay would be useful.

Q4. Is a visual alarm needed or an audio alarm?

A4. At a minimum an audible alarm is required; however it would be preferable to have audible, visual, and indication of the type of alarm and a re-set.

All other terms and conditions of the Request for Proposal remain unchanged.
