Amendment 001 is being raised to answer questions from a potential bidder as follows:

QUESTIONS:

1. Is there a gradation of the coal to be screened ?
2. What is the percentage of each size of coal found in the coal to be screened : that is the screened size and the pea coal size ?

ANSWERS TO QUESTIONS 1 & 2 BELOW:

- Coal available for screening depends on what NSPI has on the ground at the time of screening.
- As it is purchased from NSPI, the size range of the coal available for screening is dependent on what they are importing (i.e. we don't have any control over the type or quality they are importing at any given time)
- For the above reasons we don't know how much coal needs to be screened in order to obtain the required output.
- The above 3 points are consistent with the bolded paragraph on pg. 1 of the Statement of Work.
- The site visit provides potential bidders the opportunity to view the typical product that goes into the screeners. Therefore, we strongly recommend that interested bidders attend the site visit and then they can see the raw product.
- The required yield size of the 2 products is clearly stated in the Statement of Work under Mandatory Equipment. The screening equipment must be able to produce the screened and pea product within these ranges. Screening equipment which cannot yield product within these ranges does not satisfy the requirements of the RFP. Bidders who have screening equipment which may produce other sizes but not these sizes cannot be considered as part of this bidding process.

ALL OTHER TERMS AND CONDITIONS REMAIN THE SAME.
