AMENDMENT 03

QUESTIONS AND ANSWERS

Questions and Answers from 1 to 3 were addressed in the previous Amendment 02.

Q4: In reference to Annex A, item 1.2 (Background), on page 11 of 14, where the following is stated: "The LiDAR system will be used to develop high-resolution three dimensional models and/or maps of wetland and delta and river environments that would not be possible using traditional survey systems."

Can Environment Canada provide more details on the intended deployment scenario for Industry to better understand the constraints in weight and power supply that have been defined in the RFP?

A4: The constraints in weight and power supply for the system are for a number of reasons:

- 1) In almost all instances, we are not able to land or drive directly to our survey sites. This means carrying the system through thick brush and trees, wetlands or up/down hills. A lighter system is preferred for this reason.
- 2) Field sites are typically accessed by helicopter and/or small boat. An accessively heavy system (batteries, tripod and carrying case) starts to impact our ability to carry other gear in the helicopter and/or small boat.
- 3) Power supply requirements are outlined because we predominantly work in remote areas with no access to alternating current (A/C) power during field work, hence the need to operate on batteries. Bringing an A/C power supply, such as a generator, is not acceptable.

All other terms and conditions remain unchanged.
