This amendment 006 is raised to answer the following questions:

Q1 Environmental requirements: Is this going on a vehicle? Aircraft? Spacecraft?

A1 It will be used on land. Our current application is not going on a vehicle. Future projects might be on vehicles. If we need to make an enclosure for that purpose, we will do that. It will be mounted on a pan and tilt unit with our antennas. There will be slight vibration from the positioning on the pan and tilt.

Q1a Does it need to be hermetically sealed?

A1a The unit does not need to be hermetically sealed.

Q1b Temperature range

A1b -20°C to +65°C

Q2 Are there external dimension requirements?

A2 No. we were just trying to keep it small so the cables and waveguide is short to minimize losses.

Q3 Is it acceptable if the IF frequency is inverted from the RF frequency? In order to best meet the specifications an inversion is required which is generally acceptable for these types of systems.

A3 We are ok with the IF frequency being inverted from the RF frequency as long as our specs are still met.
