

Questions & Answers

Solicitation No.21401-16-2190062, Scalable Aerial Photographs

Q1 Note the Annex "A"- Statement of Work in the Request for Proposal states that, " sites identified above refers to the extent of the properties and are shown on the plans on the disc enclosed as part of this request."

A1 Information on disc has now been posted for access by all potential bidders.

Q2 What form of proof should the bidder provide to comply with Section 1.1 Mandatory Technical Criteria, subsection 1.1.2.3 "The bidder must provide proof of experience completing digital conversions of aerial photographs, analyzing comparisons and revising database information using Microsoft and Auto CAD."

A2 A Resume with past experience on similar projects with client contact info is sufficient.

Q3 Note the Annex "A" – Statement of Work, Page 20 of 24, - "Final Deliverables of the mapping portion of this project". As part of the CSC CAD file update, are underground services (new water lines, sewers, sanitary, storm) inside and outside of the institutions to be updated also?

A3 Only surface features/utilities need to be identified and added / locations corrected (what can be seen on the aerial). Nothing is required for below ground services.

Q4 Under Annex A, Item # 1, Final Deliverables of the Mapping, it states a requirement for **Updated CSC CAD Files in AutoCAD Format**. Can you please elaborate on this? Are you looking for a full review and update of all features shown in the existing services plans that were provided? (i.e. communication, electrical, building, grading, water etc...). If Map updates are required can you provide a sample CAD version of the one of the site services plans and confirm whether the updates can be done from aerial photography or are site visits/field work required?

A4 The AutoCAD Site Services plans provided show both above ground and underground services. The work is to confirm based on the aerial photography the **surface** features, elements, etc. No field work to confirm the underground variations is required.

Q5 Under Annex A, Item # 1, Final Deliverables of the Mapping, it states that **Copies of all drawings etc., obtained from other agencies in the execution of this project.** What types of drawings would Public Works typically expect to receive?

A5 This is a Correctional Service Canada Project, not PWGSC. If your company needed to acquire a drawing of control points from other sources, a copy of that drawing would be required.

Q6 Under Annex A, Item #8, it states **The database updates be required.** Can you please explain what this means?

A6 Take the site services plan, update any surface features that do not correspond with the digital rendition of the Aerial photograph, and indicate by cloud or other method what has been changed and note same on the Def layer.

Q7 Is there an expected budget for this project?

A7 Yes but it is an open tender so no budget number will be provided. This can skew a bid to which the number is based on the best work possible and not based on what could be an erroneous budget number.

NOTE TO BIDDERS:

The photo for the buildings are to be done for Bath Institution and Millhaven Institutions separately but for Collins Bay Complex and Joyceville complex, photos of the buildings do not have to be separate for the medium and minimum areas (formerly Frontenac and Pittsburgh Institutions).
