This solicitation amendment has been raised to provide answers to questions posed by potential bidders during the tendering period.

Q14: Can you confirm if the 150A service from the transformer is going to be overhead or is it possible to go underground? The overhead conductors will need to be a minimum of 3.5m above the finished grade. If installed as the detail drawing shows the mast would require support via guy wires or the mounting pole for the distribution equipment would need to be 10 feet above grade.

A14: The service from Fortis will be overhead and they will deal with anything before the meter. Please bid as shown on the plans. If changes are required they will be dealt with via extra work.

Q15: Also can you confirm if the "Detail A" drawing for the incoming distribution is correct. The drawing shows the service conductors going to the meter first and then to the disconnect which is known as hot metering. If the system is three phase it should be cold metering, where the service conductors go to the disconnect first and then to the meter.

A15: This is what was designed by the Electrical Engineer. Please bid as shown on the plans. If changes are required they will be dealt with via extra work.

Q16: Is and enclosure required around the lift station? If so please provide drawings and details.

A16: No.

Please refer to designs and specifications for any further information.

Other supporting documentation can be found in the following documents.

All other terms and conditions of the Invitation to Tender remain unchanged.
