Solicitation Amendment # 006 is raised to respond to a question from industry:

Question # 003:

I read the response this morning and I would like to offer a counter point to the statement "This information is not mandatory to creating a bid response."

I would contend that the BSB Chart Handling feature is not a standard feature of most Radar/ECDIS systems and it must be developed. That involves applications engineering which comes at a significant cost. The costs need to be recovered within the selling price of the equipment. In order to determine these costs and thereby the pricing of the equipment in our bid we need to understand the scale of development work needed. Hence our original request.

Is it possible to reconsider our request based on the above?"

Answer # 003:

Canada understands that there is some development required to read BSB v4 encrypted charts using chart handlers already available within ECDIS for other chart formats. BSB v4.0 encryption code and sample BSB v4 charts in question, do not include chart handling software, only source code to unlock encrypted charts. Canada does not believe this information is mandatory to providing a reasonable bid response. Due to the lengthy process that may take place with CHS in order to make these files available, and thereafter to parse the information, it is Canada's intent to only provide the BSB v4 encryption code and sample charts after contract award, upon request.

All other terms and conditions remain unchanged.
