

Questions and answers for solicitation No. 5000017047– Proposed Responses

Question 2:

The solicitation makes reference to up to 100 areas across Canada that will require data collection and compilation. Are any details available regarding how these areas will be selected by the department representative, how large they are, examples of typical areas, etc.?

Answer 2:

Areas will be selected on the basis of proximity to known anthropogenic activity and will be distributed across Canada. These areas will have variable size, depending on whether the selected data is upstream of industrial activity or from regional reference sites. Ultimately, the scope of the reference sites chosen will be carefully defined by the Contactor in discussion with the Contracting Authority.
