AMENDMENT 004 ALFRED NEEDLER

Notes received from Hull Paint FSR.

Below are notes that we had when reviewing the specification for the Alfred Needler.

HD-03 line 13 should state before application all substrate must be air blown down to remove all blast contamination; and if needed areas cleaned to an SSPC-SP1. You have a thorough cleaning of the hull listed line 1.

Surface Prep spec line 6 for the Ballast Tanks is only SP3 we would recommend a minimum of SSPC SP11.

H-09 Cable Transit Repairs No area is given so I put in 1000 sq.ft. Also there is no info as to what the surface preparation should be so I would suggest blasting to SSPC SP10.

HD-09 Fresh Water Tank Line 17 Has no area or surface preparation. I have put in 1000 sq. ft and we would recommend a blast to SP6 or power tool to SP11.

HD-09 Interior of the fresh water tank. Product specified is a competitor product. As it is only tested to NSF approval but not approved by NSF we would suggest two coats of Interline 975P see data sheet for coverages etc...

E-01 Anchor Windless line 40 has no area so I have used 100 sq.ft. for estimating.

E-02 Has a competitor product. I have offered our Intergard 264 as an alternative. As there was no area given I used 100 sq.ft. for estimating.

E-03 Has a competitor product. I have offered our Intergard 264 as an alternative. As there was no area given I used 100 sq.ft. for estimating.

ALSO:

E-05 BITTER END MODIFICATIONS HAS BEEN CONFIRMED AS 100% CANCELLED.
