Q1: Specification section 12 35 53, Item 2.2.1 discusses the epoxy countertop material. In the first sentence it says " ... finished thickness of not less than 1.25mm thick," Epoxy countertop material only comes in 19mm, 25mm or 32mm thickness. Is this 1.25mm reference confusing imperial vs metric? Was the intention 1.25" thick which is actually 32mm?

Furthermore, it appears the intent of design is for 32mm thick epoxy with an integral moulded 100mm high backsplash (reference Casework Keynotes 10 on drawings A2.11, A2.12, A2.21 and A2.22. Also reference detail 9/A6.02. Should we proceed with 25mm thick epoxy.

A1: 25mm countertop acceptable. Top of countertop elevation to reflect casework elevations on A0.02 & casework detail 9/A6.01.

Q2: Reference drawing A2.20, Acid Room H158C - There is reference to a countertop with sink but no elevation is included that would suggest metal casework, if required, below supporting said countertop. Please provide details for this elevation if this is to be included in our scope of work.

A2: No casework is to be included below the countertop with sink.
