Question:

1. Reference the question today in regards to the distance from the power source from Hydro Quebec to the Power Distribution Box, does the wire have to be underground or on top. Is the client looking after that ? Are all the shelter be close by or are they all spread out? If you what are the distance of each shelter for the power source ?

Answer:

1. *The external electrical panels will be positioned close to the shelters. Consider a maximum distance of 10 meters between each shelter and the electrical panel that provides it. We have no preferences on the way in which the electrical wires are supplied to shelters. However, the wires should enter inside through the outer coating or through the floor.*

Generally the shelters will be located on different locations.

Delete: ANNEX "A" STATEMENT OF WORK, 3. MANDATORY TECHNICAL REQUIREMENTS

A1-4	The shelter must have double layer insulation, must be able to withstand temperatures between -45C and +50C
