Question and Answer

Attachment No. 004

Q1. Are you interested in incorporating an affordable, long lasting European LID permeable paving/ground reinforcement system into portions of the project that will save you money, both initially and long term, as well as help demonstrate your commitment to sustainability?

Ecoraster is an affordable LID permeable ground reinforcement grid system that has been widely and successfully used in Europe for over 20 years.
We have "depaved" many parking lots.

A1. We have determined it is not suitable for application to this project site.

During the geotechnical investigation the possible use of infiltration for Stormwater Management for this site was assessed and it was determined that the existing soils are not conducive to infiltration and this is not a practical solution to implement at this location.
